**Warning Children
about Spychips
with Dr. Katherine Albrecht**

Warning Children about Spychips

February 5, 2015

C. AUSTIN FITTS: Well, it's my pleasure to welcome to The Solari Report Dr. Katherine Albrecht. She has been with us twice. I really encourage you to go into the archives and listen to both interviews.

She is author, expert, and co-author of arguably the best book on the whole topic of spychips and invasive technology. She is a very sought-after radio host. I think she is the top speaker on the topic of the risks of technology for invading our privacy.

Katherine holds a doctorate and a masters from Harvard and is just unbelievably articulate on this topic. It's always a pleasure to have her on The Solari Report.

I also wanted to mention that you are an executive with a search engine start page, which many Solari Report subscribers now use thanks to you. There is a new email program start mail that I want to talk about, too. With that, welcome to The Solari Report.

DR. KATHERINE ALBRECHT: Hi, Catherine. It is so good to come back and give people an update. I've had a lot of exciting things happen in the last year. A lot of things that I've been working on for many, many years have come into fruition. There is no time like the present, I suppose, because the things that we are up against seem to have become even more compelling, more gruesome, and more apparent to regular folks.

I think it's good that we have these conversations periodically to just keep everybody on top of things.

C. AUSTIN FITTS: We just published our annual wrap-up. One of the top

stories that we described in *Trends* was transhumanism which, of course, gets into a lot of these. I have questions about that as well.

Let's go back. Very quickly tell us how it is you came to write *Spychips* and really become the expert in this area?

DR. KATHERINE ALBRECHT: Well, it's been a long journey. I've been doing this for 15 years now – since 1999. I guess I'm coming up on 16 years here shortly. Really the genesis was all the way back to the time when I was a little girl at eight years old and my grandmother cautioned me that there would be a time when people wouldn't be able to buy or sell without a mark. That, of course, is the infamous 'Mark of the beast' as described in the book of Revelation.

I promise you that this was in the 1970's. We didn't have any of the surveillance equipment that we have today. We didn't have high-speed ubiquitously networked computers for cash registers. We didn't have satellites up in the sky posting our every move on the internet. We didn't have internet! We didn't have bar codes. There was none of that.

In fact, I'd never even seen a credit card but I knew they existed. I knew there was something called 'Diner's Club' and some people had them, but I'd never seen one. Everybody I knew paid with cash or check.

When my grandmother promised me to never take a mark with a number to buy and sell, it seemed like a no-brainer. Of course you wouldn't do that!

I also remember at the age of eight being really struck by that thought and asking myself, "Are we ever going to come to that point? I don't think so, but I'll tell my grandkids and great-grandkids, and someday when this happens they will know not to take it."

In my 30's I became aware that many of the things my grandmother had talked about – buying and selling with the numbers – before she passed away the following year, which was really a tragic thing that I lost her. I am glad that she shared that with me before she went to her reward and

went to be with Jesus because I know that's where she is at now.

For decades I just did my own thing. In fact, part of my resume or my bio there is that I took courses at the MIT media lab. Back in the early 90's I was one of the first people to develop a webpage, be using the internet, and I was part of a whole bunch of groups who have since morphed into transhumanism at the MIT media lab.

I was really 'on the wrong road' is the way to put it. I remember telling some of my professors, including Professor Sherry Turkle at MIT who wrote *The Second Self* and has written a lot of questioning things about the internet, that I thought she was an old fogey. I was in my 20's and I said, "This internet is the way of the future."

C. AUSTIN FITTS: "It's wonderful!" All these wonderful things!

DR. KATHERINE ALBRECHT: I remember her cautioning us because at that point they had just begun the Human Genome Project and her saying, "At some point they are going to map out the entire human genome, and then just imagine what type of powers they'll have."

I was like, "Come on!"

It's funny. I've gone from being a 'rah-rah' pro-technology twenty-something to being a very much Luddite. I'm a cautionary person at this point in my life, but all of that coming together, in 1999 I became increasingly concerned that the things my grandmother had warned me about when I was a kid were actually happening.

We had the mobile speed pass where people were able to buy their minimart groceries and pay for their gas with the wave of a fab which was transmitting a unique ID number. We had people paying with credit

"Back in the early 90's I was one of the first people to develop a webpage, be using the internet, and I was part of a whole bunch of groups who have since morphed into transhumanism at the MIT media lab."

cards left and right. By that point I think everybody who wanted a credit card had one. They used to be really hard to come by, but then they were giving them out like candy.

I think it was the Digital Angel implant – the RFID implant – that people were already starting to say, “It sounds like the mark. It sounds like it might be that.”

I think all of that coalesced for me in 1999. I think I actually had a pretty extraordinary experience which I will tell you because I know you’re a Christian. I had a visit by the Holy Spirit in 1999 – the kind of thing that pundits and people historically write about. I had that same thing happen – the blown across the room, totally illuminated for an entire week of my life, picked up out of my comfortable life as a newlywed and new wife and graduate student at Harvard. I was doing all these things, and all of a sudden – kablam! I was suddenly an activist.

Prior to that, I really didn’t have any television or radio experience. I didn’t have a mission per se. I really felt that I got picked up and put on this path of a mission.

I remember when I was trying to come up with a name. I knew during that week that I was meant to research – of all things – supermarket frequent shopper cards. People don’t realize this, even now. You say ‘supermarket frequent shopper cards’ and they go, “What?” because everybody has one and they’re so pedestrian now that nobody thinks about them.

It was actually the technology that was introduced through the 1990’s and the early part of the next decade that made it so that there is now an RFID reader device at virtually every point of sale terminal – what we used to call a cash register – in the world.

They now have these things to receive individual numbered identity from individual shoppers in Vietnam, in Thailand, in Yemen, in Jamaica, in Venezuela, and pretty much every country on the globe, and nobody really seems to have noticed when that infrastructure was put in

place. Now you've got an infrastructure that has converted the cash registers into devices that can actually request and treat people differently based on a unique ID number associated with each individual shopper.

I think that coming together was really where I got involved in my own activism. In fact, I switched my doctoral research topic at Harvard to researching supermarket frequent shopper cards. That is what I wrote my dissertation on. I'm probably the world-renowned, first and foremost expert on – of all things – frequent shopper cards.

Literally billions of dollars were invested in developing the ability to link individuals to their purchases at the point of sale at the world's cash registers – whether they're food, clothing, everyday dry goods, or whatever it might be. Literally billions of dollars and about ten years' worth of effort went into making sure that all of those cash registers were equipped with this technology.

What has happened since, of course, when you bring in the RFID part of it is that they have all been equipped not only now to take a frequent shopper card or an ID number, but they've also been equipped to take a radio frequency based payment.

This is actually interesting because when we wrote *Spychips* back in 2005 – it's been almost ten years now; I guess we need to come out with an anniversary version – the big concern was that they were going to put these RFID tags in consumer products. For people who don't know what that is, this is a tiny microchip antenna combo that can be stuck on or molded into or woven into the things that we buy.

They were really disturbing plans which we detailed in our book for how to use those spychipped items that people own in order to track and surveil them and keep tabs on what they own, be able to scan the contents of a woman's purse from across a room, and that kind of thing.

The two biggest areas where we said this could most be a real problem is 1) in tagging people, and 2) in tagging payment devices or payment cards. Those are the two places where we've seen the most traction with

RFID. It's kind of ironic because here we were warning that they would tag products that could be used as a proxy for tagging people, and instead they cut right to the chase.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: As your listeners are listening to this and they're saying, "Oh, RFID. It sounds really terrible," I guarantee you that at least half – and probably more – of your listening audience, if they were to open up their wallet they would discover that they themselves have RFID tagged credit cards in their wallets. These are the ones that are 'wave and pay'. They have their own little symbol on them that looks sort-of like nested letter C's or D's and an emanating wave symbol.

That technology – the very same technology in the 1990's and 2000's they were implanting into animals and into people and into people's hands and their arms. That exact same microchip technology is what has now been implanted into all of the credit cards.

What it means is that we've now got every grocery store, every major department store, every shopping locale on planet Earth capable of receiving an RFID-based payment which is right now being done through our credit cards. Of course, that would be an intermediate stage. First you get the credit card that gets everybody paying with a number. Then you get the RFID. It gets everybody paying with a number that can be transmitted through things, and then you put the number in people's hands.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: This is what people don't understand. The technology – the infrastructure – was quietly put in place over the last 15 years to make it possible to take a payment device, and instead of putting it in your credit card, you can put it directly into your flesh. Then you can press your flesh right up to the reader device at the cash register and you can make your payment on the fly. The technology is here.

The thing that my grandmother warned me about back in the 1970's that seemed so distant are here.

C. AUSTIN FITTS: I'll never forget going to a state fair in Tennessee. Here I am out in rural Tennessee. It was a couple of years ago, right after we first had you on The Solari Report. There was this big booth with a group of people trying to talk low income people into having their children chipped so that they could make sure they didn't lose them. They could track where they were.

You looked at it. Of course, we've seen it done with the pets as well. You realized, "Oh my God! They are working their way in."

Of course, we've seen it with soldiers and people in the military.

DR. KATHERINE ALBRECHT: It's there, but the other thing I'm going to be calling for a boycott of is Disney this year. I'm personally boycotting them now. Everybody listening can go ahead and join me.

“Disney is training children and conditioning people to associate these RFID wristbands and actual RFID tags that monitor your whereabouts that you use to buy and sell...”

Disney is training children and conditioning people to associate these RFID wristbands and actual RFID tags that monitor your whereabouts that you use to buy and sell and associating it with the 'happiest place on Earth' and 'my tenth birthday' and 'my wonderful summer vacation'.

The Disneyworld theme park down in Orlando, Florida is issuing something called a MagicBand to the kids who go into the park and the kids' parents and families. The MagicBand is literally an RFID tag – the same one you would put into an implanted microchip, but it's in a wristband on your right wrist. They use it for everything from opening their hotel room to getting on the tram to buying lunch and French fries and pretty much anything you want to purchase in the park. You don't use cash anymore; you use your MagicBand. In fact, they even use it to get on the rides.

If you look online, it's really creepy. They've got this glowing orb thing. It's a brushed metal orb and inside of it outlined in green neon is Mickey Mouse's head. When you bring your wristband over to the head, the Mickey Mouse lights up and glows brighter and says, "You've been read."

You can see this online. They have these on unboxing events. They're so excited and they're screaming "Hooray! My MagicBand!" They've even got stores throughout the theme park where you can go in and just like you would buy a balloon or a commemorative mug, you can go in and buy your little wristband holder so you can slip your wristband into something even more exciting and you can be a princess or Buzz Lightyear or the Incredibles or whatever it might be.

It's a huge deal for people going to Disney, but it's also really deeply concerning to me that here is the technology that we've been told for 2000 years to look for and that Christians have been on the lookout for for 2000 years, and now that it's here, not one peep. Not one peep!

You don't hear anybody complaining. You're not hearing it from the pulpits from the churches or from the activists or from anybody. It's very bizarre, and I think we were sort-of cautioned in the bible that it would be like this.

Here is the thing that everybody has been looking for, and now that it's here nobody wants to discuss it.

C. AUSTIN FITTS: Here's what part of the challenge is. Long ago if you sat down and studied Revelations it was told that the police states would come and force this on you.

One of the things that I've been watching – because I get a tremendous number of magazines just to track popular culture – is the amount of money that is being spent on wearable technology and making it fashionable. It's unbelievable.

Of course, they talk about how hot it is, hot fashionable it is, and then it

doesn't sell. It's not selling that well in the instances that I know of, but the push to make this fashionable and to have people want it is enormous.

DR. KATHERINE ALBRECHT: I think you just hit on something totally on target, Catherine, which is that our generation always thought growing up that there were movies made about it and there were some radio plays about it. There were cheesy, campy TV shows made about it.

In all these scenarios, there were screaming bunches of people being hoarded into camps by jack-booted thugs who would shoot anybody who resisted. In reality, that is not at all how it is being ushered in. We thought that it would be obvious and that people would have a choice of either resisting by having their lives taken from them or complying at gunpoint, and in reality you see people actually paying for these technologies today.

This is really kind of the theme of my own radio show that I've been talking about lately – the difference between 20th century and 21st century tyranny. In the 20th century it was really about guns and tanks and goons and thugs and, “Do what I say or I'll kill you.” People who dissented or disagreed got rounded up and put into camps.

There was a down side to that for the oppressors, which is that you then create a population that hates you and is looking for any opportunity to overthrow or topple or assassinate you whereas today the new version – which is made possible because of social media, and I'll explain why in a second – is really about instead of getting people to do what you want them to do against their will, it's bending their will.

You don't bend their actions; you bend their will and then their actions follow.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: So you've got a population now, and what was today's headline news? It was, “ISIS hacks into the CENTCOM

Pentagon Twitter account, and “Oh, isn’t that terrible?”

This happens on the very same day that we got this announcement from the New York police department that they are issuing a red alert and the FBI is on board. They are issuing a red alert to all the police departments across the entire country that ISIS is a threat – not because of this Twitter hack, but because of some other thing.

Then we get the report that Paris is basically under Martial Law right now with 10,000 troops in the streets. On the very same day, we also get President Obama giving us a little appetizer of his January 20th State of the Union address in which he tells us that he is going to be really, really cracking down on cyber security.

You put all this together and you go, “Wait a minute.” What is happening is you’re creating a desire on a part of the population to be controlled when it comes to the internet. You’re creating a desire to have the government have more power and more control to save you from those scary, scary ISIS terrorists.

You can do this in terms of government policy where they convince us – or the majority of the population – that this is exactly what has to happen, and they would come at you with a pitchfork if you would suggest otherwise.

They also do this with consumer products. If you think about it, 20-30 years ago there was no possible way back when we were watching those videos or those TV shows, if they would have said, “The government is going to issue a tracking device and know the exact location of every person in the country,” we would have freaked out and fought them with guns and pitchforks.

Today all they have to do is couch it in a nice, sleek exterior package and they sell it to us as a cell phone and they get us to pay \$400, \$500, or \$600 for the privilege of a tracking device.

C. AUSTIN FITTS: Yes, we are paying for the privilege. Pretty clever!

DR. KATHERINE ALBRECHT: It is clever because it serves a couple of purposes. Number one, it makes them rich. Number two, it gets us exactly where they want us – which is within their crosshairs to be able to be observed and watched. Number three, it causes us because we believe that they are our friends it makes us into huge proponents of these things instead of opponents.

They don't have to watch their backs, they know that everybody loves them if they're Google or Apple or whoever, they know that they are the greatest thing since sliced bread, and they know that everybody loves them.

In fact, it's funny that the two most trusted companies in the United States among US citizens last year were Google and Disney, which is ridiculous.

“They don't have to watch their backs, they know that everybody loves them if they're Google or Apple or whoever, they know that they are the greatest thing since sliced bread, and they know that everybody loves them.”

C. AUSTIN FITTS: I'll never forget one of the most interesting conversations I had with a very senior retired military guy who worked at a very large defense contractor with a major installation right next to Disney.

He regaled me with the 411 of how the defense contractor develops everything and then they give it to Disney. Disney gets all the credit, and they're sick of Disney getting all the credit, but they need to do it this way to keep it all secret.

I don't know if you realize that a lot of what is coming out in Orlando is developed next door by the military.

DR. KATHERINE ALBRECHT: I would love to talk to you further about that because Disney is not a theme park.

C. AUSTIN FITTS: No, no, no.

DR. KATHERINE ALBRECHT: It's an enclosed research city, and there are few

other places where you can actually have a population under your total control for 72 hours straight where they're sleeping under your control, they're taking transportation under your control, they are eating and going to the bathroom and doing whatever they do 24 hours a day for three days in a row, and that is exactly what is happening at Disney.

If people want to check this out, Disney actually has a research arm called DisneyResearch.com. You can go online and look. They've trimmed it way back since two or three years ago when I first found it, and they've made it much more generic, but they have deep industry connections with the military, with Carnegie Mellon University, and they're doing all kinds of research.

They boast that they have a captive audience on which they can test out these new technologies.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: If you want to see how to control the City of Seattle or the City of San Francisco or the City of Los Angeles or whatever it might be, your easiest bet would be to try it our first on Disney. There you have people seeming to go places and do their own thing, and you can watch them.

C. AUSTIN FITTS: When people say to me, "We're all going to be rounded and put into camps," I say, "Don't be ridiculous. We'll buy a cell phone that will entrain us." It's way too expensive to put people in, and you can't keep harvesting them. Instead you have to feed them.

One of the things I try to explain, and I've always struggled with explaining the fact that if you can be tracked in this way then the value of your economic productivity can be transferred to someone else and you're ground down to nothing. This is very much an insider trading system.

For many people it's hard to fathom how this works, how it's going on, and how this intelligence flow can compromise your safety, your

security, and your economics. One of the best documentaries I've ever seen to help understand this is *Shadow Government*. I know you made an enormous contribution to it, and I think it does a very good job of explaining to people how this works and what some of the risks are.

I thought maybe you could just spend a minute or two on that. That would be great.

DR. KATHERINE ALBRECHT: Yes. I appreciate your bringing that up. That was actually the video of Grant Jeffrey – rest in peace. His final book was called *Shadow Government*. Grant Jeffrey was a prophecy scholar and a really great public speaker and a really good disseminator of these kinds of ideas and concerns.

When the book came out they actually contracted with Cloud Ten Pictures to create a video to go with it. I was contacted as just a talking head to be in the video, but in the course of talking to the producers of the video we realized that they were really struggling to try to figure out what to put on camera.

Long story short, I stepped in as the Associate Producer of the film and I spent the next six months of my life flying around the country interviewing people and really pulling out my Rolodex and saying, “You want to talk about this? Here are the people you need to talk to.”

We've got everybody in there from Joan Veon who was doing extraordinary work exposing the United Nations. She of course passed from breast cancer. This was one of her last interviews.

We have Lee Tien from the Electronic Frontier Foundation, we have Chris Paget who was the researcher who drove down the streets of San Francisco with a car-mounted RFID reader and actually read people's real ID driver's licenses right through their purses and wallets.

C. AUSTIN FITTS: Wow!

DR. KATHERINE ALBRECHT: Yes, we got footage of that. It's really an

extraordinary film in many ways because it really is sort- of a snapshot in time of everything that I knew at that point in time because I got all my friends to be in the video.

The thing I really like about it is it is the kind of movie that you can say to your friend who doesn't get it and who doesn't understand any of this and thinks you are a conspiracy theorist, "Listen, I know you think I'm nuts. I'll tell you what. Just watch five minutes of this movie and I guarantee you if you put this film in, five minutes is going to turn into ten minutes is going to turn into watching the whole thing. There's no way that you can watch just five minutes of this movie."

There is nobody who is going to say to you, "No, I don't have five minutes." People are willing to give you that much time, and then you've got them.

So invite your friends over and say, "Just five minutes and then we can play scrabble or whatever," and instead you'll wind up watching the whole film.

By the end of the film – and this is the crux of all of this for me – Grant Jeffrey, after we lay out this whole case of how you can be surveilled, and it basically tells the story of a man. We used him as the storyline, but he gets in trouble with the government because he's posting anti-abortion flyers.

They figure out who he is and they trace him back and they call him in for questioning. It's sort-of how all these aspects of his life lead them to figure out who he is.

By the way, he's doing nothing illegal. He is in no way doing anything in violation of any laws or anything else. It's just that the world we live in today where everybody seems to be under suspicion.

Then at the very, very end you have Grant Jeffrey step onto the camera. He's holding a bible in his hand. That's the one thing I would say is that if people are not Christian they can watch the entire film and they won't

have any Christianity at all. When you see Grant Jeffrey come on, you can turn it off. But if you are Christian, this is the end game. This is the big picture. This is what has been talked about for 2000 years in this book.

C. AUSTIN FITTS: I always think of you whenever these things happen. One of my favorite times this year was reading a story in *Wired Magazine* quoting all sorts of folks at Google who had no idea that the NSA had a pipeline right into the dark fiber. They're going, "We had no idea."

Well, what about now – now that you know?

DR. KATHERINE ALBRECHT: I'm telling you! And Google is really an interesting case in point because first of all, the Google founders when asked what they wanted to become by *MIT Tech Review* said, "The mind of God."

The mind of God is a pretty massive ambition there. They are working to become exactly that. They want your DNA, they want the picture of the front of your house, a satellite picture of your backyard, knowledge of every book you read, your calendar, your GPS location, and they want to be the Android system on your phone, and it goes on and on.

Their recent acquisitions this year say a lot about the company because in this last year they have acquired military robots capable of hunting down people in packs and killing them in the woods from Boston Dynamics. That's where you get Big Dog and these other really disturbing military robots.

C. AUSTIN FITTS: And lots of artificial intelligence.

DR. KATHERINE ALBRECHT: Yes. So they have DBAI. They've got these really creepy military robots. You don't see any possible reason why a

"Their recent acquisitions this year say a lot about the company because in this last year they have acquired military robots capable of hunting down people in packs and killing them in the woods from Boston Dynamics."

‘search engine’ would ever need those!

They’ve also bought Nest. I’ve been saying on my radio show for the last five years that Google is looking for a way to get into your home, and you have to say ‘no’. Of course, they bought this company called Nest for \$3.2 billion that makes of all unsexy things thermostats and smoke alarms.

If you think about it, what is there that is in all of our homes? We all are required by law to have smoke alarms.

C. AUSTIN FITTS: And Nest makes beautiful ones.

DR. KATHERINE ALBRECHT: It’s into the tent. It’s really about how they can get into our homes. Then, of course, they spend half a billion dollars – which sounds like nothing compared to \$3.2 billion, but it’s still a lot of money, \$500 million – buying Dropcam. You can go on YouTube and see these terrifying videos.

Really, I have to say probably the creepiest thing I’ve seen in the last six months is Dropcam videos posted online where people are literally aiming these cameras at their beds, their dining tables, and it’s a camera and a microphone that is pumping constant surveillance video of you in your home up to the Google cloud.

You just think, “How can people be so stupid?” Does any common sense enter into this? This gets us right back to what we were talking about. It’s not guns and tanks. It’s not terror and fear. It’s, “Hey, pay us \$30 a month and we’ll archive all of your dinner conversations for you.” Hello!

I think Google is the company to watch. I think they’re working to be the global brain, the mind of God, and ultimately where there’s a web there is a spider. Where there is a net there is a predator. I think Google is probably fitting right in the middle of that web.

C. AUSTIN FITTS: I have to tell you that I think your description is kind. I

couldn't agree more, but I'm even more extreme when it comes to describing them.

Talk a little bit about your search engine.

DR. KATHERINE ALBRECHT: Let me just say something about Gmail because this is the one thing that I would hate people to come away from this conversation and not know – and most people don't know it.

Back in 2004 Google introduced Gmail, so they've gotten away with this for ten years. Their goal at that time was they realized how much information they could glean about people from their search engine because people type everything from divorce attorneys to drug abuse counseling to cancer treatments. They type it all into Google, so Google gets access to market research data beyond their wildest dreams.

If you want to understand what Google is, they are not a search engine. They are not an email company. They are a market research company, and the most profitable one in the entire history of humanity. They are so profitable that they are looking at building entire cities and airports. I mean, they've just got money to burn.

You ask yourself, "Well, I never paid for anything." When was the last time you ever paid for anything from Google? So how is it that they are making literally tens of billions – or maybe even hundreds of billions of dollars?

C. AUSTIN FITTS: They are an intelligence operation.

DR. KATHERINE ALBRECHT: Yes. They are an intelligence gathering company. Back in 2004 their frustration was that they could not see the actual conversation. They want to know everything. They want to be the mind of God.

They could not actually eavesdrop on our conversations. They had no way to get inside our heads, inside of our homes, inside of our phones, inside of our email, inside of our communications with one another, so

they hit on a bright idea of creating an email product so that they would be able to get on the inside of our email communications. That is where Gmail came from. That's how we have Gmail. That is why Gmail exists.

It's because this company said, "I want to be able to know what people say to one another privately in their email. I can't hack into all the email accounts in the world, so I'll just create the world's biggest email program and then I will give myself – perfectly legally in the terms of service – the ability to listen to, watch, record, read, and analyze every single thing that passes through my servers in the form of email."

They have given themselves an inside view of the most private aspects of our lives, and I think once people realize this they will receive email from people with Gmail accounts and go, "Oh, don't they know?"

It really becomes a real visceral response. I don't even like corresponding to people's Gmail accounts because I know that everything I write is being read as well.

That is why for the last three years I have been working on an alternative called StartMail. It's at StartMail.com. It's a private email program that does not exist so that we can read your email; it exists because we're a privacy company. We charge \$5 a month for it, so it's not free because there is no such thing. I mean, somebody has to pay the bills somewhere and if it's not you it's going to be a marketer or the government.

We charge \$5 a month. We have a special running right now where if you buy one StartMail account you get two free companion accounts to give to your friends so you can immediately start writing private email.

I think probably the biggest contribution in StartMail is that we've taken PGP encryption which has always been really hard to use and we've got it down to one click that a six-year-old can do.

C. AUSTIN FITTS: Katherine, that is fantastic! That is such a huge thing!

DR. KATHERINE ALBRECHT: You just click 'Encrypt this email box' and you

send your email and voila! It's automatically encrypted.

If the person you're writing to doesn't have encryption, we have another form of encryption which is a response encryption where you just share the password in advance with the person. They type it in and they don't view it through their Gmail or Yahoo account; they actually go onto our servers in the Netherlands and view it in a private space there. They can reply to it, and you can have a back and forth going for six months that way.

C. AUSTIN FITTS: Wonderful!

DR. KATHERINE ALBRECHT: I'm super-excited about it because it's one thing to tell people, "This is terrible." It's another thing to offer them an alternative.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: This is why for three years all we've been working on is getting StartMail ready. If you go to www.StartMail.com you can watch the two and a half minute video overview. You'll hear my voice on there.

Like I said, we've got this special running, too. We're pretty excited about it.

C. AUSTIN FITTS: I want to turn now to your book. I'm so interested that you did this because as I've been watching the wearables and as I've been watching the things rolling towards the Mark of the beast I thought, "How in the world are we going to explain this to the kids?" How do you warn the kids?

You have now published a new book. It is for children. It is called *I Won't Take the Mark: A Bible Book and Contract for Children*. This is clearly targeted at kids who have a Christian background and live in a

"If the person you're writing to doesn't have encryption, we have another form of encryption which is a response encryption where you just share the password in advance with the person."

Christian household. I should say that before we start, but as we go through it I'm going to talk about what the households can do who are not Christians and whose kids don't have the bible basis that I think you need to understand.

Anyway, how did it come that someone with all your expertise and professional clout wrote a book for kids?

DR. KATHERINE ALBRECHT: I'll tell you, it all comes back to those two pivotal events: my own grandmother telling me about the Mark of the beast when I was eight. It was sort of her last official opportunity to have a huge impact on my life before she passed on. The second one was my own experience in 1999 which was the visit from the Holy Spirit.

I had made this decision at age eight that I was going to pass this information along to my kids and grandkids, and then in 1999 I got the very clear message that it is coming and it's coming now, and that my task in all of this was to write a contract to kids to inoculate kids so that kids could promise before this mark actually arrived not to take it, just as I had promised my grandmother.

Really the book is all about the contract. The book is kind of the accompaniment to explain the contract, but the contract is really the meat of this entire project.

The contract is a beautiful frameable 8x10 certificate which is on cardstock. It has beautiful illustrations of bible pictures all around it. It says, "I love God and I promise to obey him. I will never worship anyone but God, and I will never take the mark of the beast. I will call on Jesus Christ to save me and help me keep my promise." Then there's a place for the child to sign their name, and whether they are three, five, or ten, it doesn't matter. Then it has a place for a witness, and then there is a place for the date.

On my website at www.VirtuePress.com I've actually got hand-selected frames that go with this certificate – matching frames and even a hook and a nail. So it's really easy. You can order this for a child, a grandchild,

a niece, a nephew, a Godchild, or some special child in your life. You can order all of it – the book, the frame, and the certificate.

The idea is that the book explains the mark of the beast portion of Revelations. There will be a beast and he will rise up and confuse people and get them to worship him. While a lot of people say, “that’s a terrible topic for children,” it’s really a good story because Jesus returns and fights against the beast and wins. The beast gets thrown into a pit and locked up for 1,000 years. It’s a beautiful story of the marriage supper of the lamb, the people living and reigning with Christ for 1,000 years. It’s got a beautiful ending.

I have had non-Christian parents primarily say, “That’s a terrible thing to talk to kids about.”

I say, “Hang on a second. We talk to them about Hansel and Gretel, a witch wanting to fatten them up and eat them and shove them into an oven. We talk about Snow White in which her very own stepmother wants to poison her with an apple and kill her because of her looks. This is crazy!”

We have all sorts of stories that we tell children that have a conflict in the middle. They have a villain or a bad guy, there is a conflict, and then there is a resolution and a happy ending.

I think that all of those are sort of pale shadows of the true story, the real story, the ultimate story of the victory of Jesus Christ on this planet. Revelation far from being a frightening book is really a book of God’s love. It’s a book about how He redeems this fallen world and restores everything to perfect wholeness.

It does have a villain in the middle just like every other children’s book I know of, and it has a totally happy ending.

My goal really was to facilitate this conversation for grandparents and parents. We talk to our kids about, “Don’t talk to strangers, don’t do drugs,” but something with lifetime implications or eternal implications

of, “Don’t take the mark of the beast,” we don’t know how to have that conversation.

This is a book that facilitates that conversation. You sit down for ten minutes, you read the book, you sign the certificate, and you’ve now made a lasting impression on a child. They will know even when you’re long gone like my grandmother that that child will know someday if somebody comes at them with a mark that they want to put in their right hand to get them to participate in some horrible system, they will know to say no.

C. AUSTIN FITTS: Right, and they’ll know that there is a force supporting them in saying no.

DR. KATHERINE ALBRECHT: That’s the guarantee. In fact, I know you have a copy of the book there. The very back inside cover of the book we actually posted the Sinner’s Prayer, “Dear God, I know that I am a sinner and you sent your son Jesus to save me.”

I was actually saved. Few people know this, but at the age of eight I was saved from a Gideons bible from the Sinner’s Prayer.

C. AUSTIN FITTS: Isn’t Gideons wonderful?

DR. KATHERINE ALBRECHT: It’s just amazing. I had a little tiny grain leatherette bible. I don’t even know where I found it or how I got it. I don’t remember Gideons specifically handing it to me, but I was alone and I was eight or nine years old, and it was after my grandmother told me about the mark of the beast. I just remember this strong feeling of love and this strong feeling of just wanting to dedicate my life and my heart to this force of love, Jesus Christ.

I was on my knees all alone in my little house in California and I prayed the Sinner’s Prayer.

I wanted to include it in the back of this book for children who may not be in Christian households, who may come across this book in a library

or in a thrift store, or wherever they might find the book. I want them to have the ability to say, “Wait a minute. Something in here really rings true to me and I want to have a permanent connection.” So that is in there as well.

C. AUSTIN FITTS: Have you gotten feedback yet from parents who are using this?

DR. KATHERINE ALBRECHT: Really positive feedback, yes. It’s overwhelming actually. I’ve had grandparents and parents write me. In fact, a grandparent recently wrote me that she went through the book with her grandson through Skype. He was on the other side of the country, and she actually aimed the Skype at the book and they read it together.

He was saying, “The pictures are so beautiful,” and, “Whoa!” was one of his key words. He is eight years old, and he said, “Whoever wrote this book and did these pictures did real good, Grandma.”

“He was on the other side of the country, and she actually aimed the Skype at the book and they read it together.”

He had no idea. That’s the thing. Our generation grew up knowing this. You would be stunned, Catherine. You can talk to anybody from their teens to their twenties. You can ask them, even if they go to Sunday school every Sunday and go to vacation bible school every summer, you can ask them, “What do you think about the mark of the beast?”

They will say, “The what of the huh?”

It’s amazing to me that nobody knows about this anymore. It’s shocking. We’ve entered into a sort of bizarre phase where this is the first generation in the history of Christendom who does not know what the mark of the beast is.

Isn’t it ironic? Of course not! It’s no coincidence that it’s happening when the actual technology to implement the mark of the beast is finally here. We are the first generation to have the ability to implement a mark

to buy and sell with a number, and nobody is talking about it.

C. AUSTIN FITTS: Here is what I think. I don't understand because I see so many Christians who do know about the mark of the beast but they are relating to the technology without realizing that they're being acclimated to it and that it's dangerous.

DR. KATHERINE ALBRECHT: And what does the bible tell us? It says that these things will be so deceitful that they would deceive even the elect if that were possible. That means even Christians.

If there's one thing that we need to be praying for right now as a Christian church – as the body of Christ – it's for discernment. "Please, Lord, help us see. Give us discernment. Give us eyes to see, ears to hear. Help us to see when these things are really just hissing serpent-laden twining around us and trying to pull us down."

So many people have this relationship with the technology where they're addicted to it, they're staring at it all day long, they're ignoring their kids, and they're ignoring their spouses.

I was just at a gymnastics meet just a couple of days ago, and I was stunned! There were three- and four-year-old kids just the whole time standing in the line and sitting in the seats just glued to their computers. Then I looked at their parents, and they were doing the same thing.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: We really need as a Christian community to take very seriously what the bible says in Revelation about Babylon. "Come out of her, my people, lest you be partakers of her sins and receivers of her plagues."

We are meant to be a people set apart; we are not meant to be a part of all of that.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: I hear people say, “Everybody is doing it.”

Well, everybody is going to take the mark of the beast pretty soon, too.

C. AUSTIN FITTS: Everybody is not doing it because the Amish and the Mennonites are not doing it. They know.

DR. KATHERINE ALBRECHT: I think they knew from the very beginning that these things would come through technology, and there’s no question that that is where these things are coming from. They will come through technology. Whether it’s going to be the RFID implant is going to be the actual mark, we can’t really say. I know some people who have said, “That’s nothing because some people use to think it was the social security number, and of course it wasn’t. Then they used to think it was the bar code and it wasn’t. You’re out to lunch, too.”

Had I been alive back when our grandparents were protesting the social security number, I would have been right alongside joining them and I would have been right. Had I been active in the 1980’s when the barcodes were being introduced I would have been opposing that, too, because it’s all part of the same continuum.

If you want to get to New York, you don’t hop on a train in Los Angeles and watch every stop bringing you a little closer, a little closer, a little closer. Eventually you just get off the train.

Each one of those things was just a move closer and a move closer, and that is what RFID is going to be. That’s what those implants are. For all I know, they are marks of the beast. I don’t know, but I do know that there is a worship component and we haven’t seen that yet, but I think it’s coming.

I just want to give out the book. It’s available at Amazon, although that’s not my favorite place to have people purchase it because they way undercut my price and I can’t do a thing about it. But that’s www.Amazon.com, and it’s also available at my website which is www.VirtuePress.com. The book is called *I Won’t Take the Mark: A*

Bible Book and Contract for Children and it's got my name, Katherine Albrecht, and also two of my dearest friends who have also played a role in this.

If you go to the www.VirtuePress.com website you can actually flip through the book. We did this cool flip-through thing where you can click on the book and you can click through the pages one by one. You can actually see the beautiful artwork and how nicely put together this book was.

C. AUSTIN FITTS: It's very lovely.

DR. KATHERINE ALBRECHT: It's meant to be a keepsake. It's meant to be a gift book. Whenever we had choices of going the cheap route or the expensive route, I always picked the expensive route.

Everything is high quality. We have the thicker paper instead of the thinner paper, and just every aspect of this book was subject to this idea in my head that this was going to be a gift book that kids would hang onto for life, especially the certificate because that is the key thing. The child signs it and it winds up under a stack of papers and they never see it again. That is not what the plan was.

The plan was for the child to sign it and for it to be immediately framed in an 8x10 frame or an 11x14 frame and hung on their wall. That way, every morning when the child got up for school and every night when the child said their prayers and went to bed, a thousand and one times they are going to see that on their wall and they are going to remember that promise whereas if you just read it to them once and they throw away the certificate or they lose it, it's not going to have that same impact.

The real goal was the certificate to be framed and hung on the wall so that the child is inoculated for life against the mark.

C. AUSTIN FITTS: One of my churches used to have a wonderful, very graphical and beautiful poster of the Ten Commandments. It was placed

where you could not miss it. So every time I went to the ladies' room I had to read again the Ten Commandments. It was very effective.

DR. KATHERINE ALBRECHT: Especially for kids because I remember everything in my room when I was a kid. I remember what was on the walls. I remember what the curtains were like. I remember all these aspects of my room because I was there over and over and over. When you are a kid, a year is like ten years when you're an adult, so it was kind of like a lifetime that I spent being a kid and looking at the things on my wall.

In fact, my grandparents in the spare room that I used to stay in had a Madonna. We weren't Catholic, but somehow somebody had given it to them and it was very beautiful. She was in a case and she was totally gorgeous.

I remember telling my mom when I was about five years old that I was going to grow up and that was who I was going to be. She said, "You can't be."

I was going to be a nun and she said, "You can't be a nun. We're not Catholic!"

The impact of this beautiful thing on the wall and me understanding that whether it was a nun or the Virgin Mary I don't even know, but the concept of dedicating your entire life to serving God was just such an appealing idea to me at age five. Again, that's just because something was on the wall in the room I was in.

It's really powerful. People hang all sorts of ugly art. I hate to say it, but that speaks to your kids just as much as the beautiful stuff. Keep it nice.

C. AUSTIN FITTS: There are a couple of things I wanted to bring up in association with the technology you're talking about. One is: Have you seen the documentary *Terms and Conditions*?

“When you are a kid, a year is like ten years when you're an adult, so it was kind of like a lifetime that I spent being a kid and looking at the things on my wall.”

DR. KATHERINE ALBRECHT: No. I haven't.

C. AUSTIN FITTS: This is one you want to watch because it dovetails with everything that you're talking about. A group of guys got together and did a real study of all the terms and conditions we sign when we use software or search engines or anything else. It's phenomenal. It's very entertaining, and it fully discloses.

One of the things it says is if you and I read carefully every term and condition we approved in the process of using the average amount of software that people use we would spend three months a year reading terms and conditions.

DR. KATHERINE ALBRECHT: My God!

C. AUSTIN FITTS: I know. It's remarkable. The other thing I wanted to bring up is we have one of my Solari Reports where I was running into problems with investment advisory clients being targeted with entrainment technology. It really scared me because if you can entrain someone to do something fantastically stupid with their money, you can obviously make a lot of money but you can lose a lot of money.

They were having trouble understanding what I was saying – that this stuff really existed. I got Adam Trombly to do a Solari Report on entrainment technology, including its application to financial fraud.

When you combine the terms and conditions that given incredible legal powers, like Facebook saying that they have the right to access the camera and everything else in your phone and use it in whatever way they want. So when you combine the terms and conditions with the RFID technology and the entrainment, then you're talking about getting really frightening combinations. Again, for financial fraud, the potential is terrible.

I wanted to bring up something else which I've never quite known what to make of it. I had a fellow who was fairly high in the CIA and then had retired try to persuade me that the nanoparticles that were in chemtrails

– the little metallic pieces, and I don't know if you've ever gotten into the subject – were one of the reasons they were present. They would coagulate in your body and create the equivalent of an organic barcode.

DR. KATHERINE ALBRECHT: Isn't that disturbing!

C. AUSTIN FITTS: Yes. I didn't trust a word he said, so I don't know what to make of it. I always wondered if those big screeners at the airport were to provide a feedback loop to see if they could get the system working.

One of the things that always concerned me was that we were being chipped organically through the spring. Now I don't know what to make of it, but if you combine it with terms and conditions, RFID chips, and the entrainment, the whole transhumanism movement is here. And I hate to say this because it's a terribly gruesome topic to get into, but one I think we have to deal with because the question is: How do I make sure my data is mine? How do I make sure my mind and my body is mine? They're all related.

DR. KATHERINE ALBRECHT: I think ultimately it's going to have to be a voluntary thing because there's a tremendous amount of involuntary control that's happening, even as I was discussing this whole ISIS Twitter thing as just a bunch of manipulations to try to get people to demand the things that they should be resisting. There is a lot of involuntary.

I think when it comes to the actual control of your physical body, that is going to be a voluntary thing, too. I don't think that is going to be snuck into us. I think it's going to be that people will be fully deceived and they will welcome this opportunity.

When you couple this with transhumanism, because I know you were talking about that earlier, I believe – and this is just my personal belief – that the transhumanists who are offering us the satanic version of God. They're offering us a fake version of immortality. They're offering the planet a fake version of omniscience. They're offering a fake version of all of these powers of God – to create and destroy life, to GMO, to

create new species, and all of these things. They are all counterfeits of the powers of God. I think that ultimately people will be offered the opportunity to remove their souls from their body, to literally upload their consciousness and their souls into the mainframe and the matrix for safekeeping. That will offer them a form of immortality.

When you read the bible, it talks about that people will be required to take this mark on their right hand and to worship the beast. They go hand in hand. They are the same thing.

I believe there is a second or some other component to it that somehow you are deriving something from this that is an indication that you don't trust God to do this for you.

There are few things that you can't be forgiven for in the bible, and one of them appears to be – at least according to my reading – taking the mark of the beast. Once you've done that, there's not much left of you for God to redeem. There's essentially nothing there.

I almost wonder if that is not going to be some kind of giving yourself over to the system for 'safekeeping', and you're going to wind up in Hell. If you give yourself to Satan, if you voluntarily offer yourself and your soul to Satan for his version of immortality, you will wind up in Hell. It's not that God is going to punish you in Hell; it's that you are going to wind up in Hell because of your own choices.

C. AUSTIN FITTS: Right, and I would say that you are going to get to hell before you get to Hell. That is hell.

DR. KATHERINE ALBRECHT: That is hell. I've wondered if that is not literally Hell.

C. AUSTIN FITTS: Yes it is. It's slavery. Each one of us has to decide if we are born free or if we are born a slave. We each have to choose.

DR. KATHERINE ALBRECHT: I am not ultimately free because I'm a slave to Jesus Christ. I absolutely signed up in full servitude, but it's like the old

song, you're going to have to serve somebody. It may be the devil, but you will have to serve somebody.

C. AUSTIN FITTS: I love that song, yes.

DR. KATHERINE ALBRECHT: The reality is that we think we're free, but we will serve Satan if we're not actively serving God. We may not be aware that that is what we're doing, but that is what will happen.

“The reality is that we think we're free, but we will serve Satan if we're not actively serving God.”

C. AUSTIN FITTS: One of the things I really enjoy about this book is, first of all, it's ritual. I think ritual is very important and group agreement is also important. But I also think that when you create an intention, you're deciding to be on one side or the other. When you create an intention and a commitment to be on the side of the divine, then the divine is for you and starts working for you.

You're creating a power, and you're calling on the power of the divine to come in and protect you. My experience is there is nothing like having Jesus on your side in a fight.

DR. KATHERINE ALBRECHT: Exactly. Yes. There is nothing that can prevail against that power.

This is really difficult for adults to know how to have this conversation with their kids. I've talked to so many parents and grandparents who have said, “Thank you for writing this book because it's something I wanted to talk about, but what do you do?” You're coming home from a baseball game, and how do you say, “I want to sit down and talk about the mark of the beast.” It's random and out of the blue, and yet with this book you can say, “Hey, I have this brand new book and I want to show you the book.”

It's the most natural thing in the world to sit down and read these beautiful illustrations and these beautiful watercolor paintings and to go through the pages of the book. Kids are fascinated and riveted by this

book. You can even leave it out, sitting on the coffee table, and the kids will gravitate towards it and start reading it. You'd be stunned.

Oh, I should mention, too, the book is not just for children because each of the pages has a box on the left-hand side. It's a narrow, tall box in which we actually put the original King James scripture. So the format of the book is the King James scripture on the left. You've got a big parchment in which I translate that to regular language for children, and then there is a beautiful picture on the right-hand side.

It's appropriate for small children. It's also appropriate for even high school age kids because they can use it as a study guide and actually focus in on the scripture.

It's even appropriate for adults. I can say that most of the adults who have read the book probably did not know what was in the book of Revelations. It's a great way to familiarize yourself with what is in the book of Revelations as well. We do that with King James scripture because I think that it is critical that people be able to realize that every single thing in this book comes directly from scripture. We didn't make anything up; we didn't add anything; we didn't subtract anything. It is exactly what is there.

C. AUSTIN FITTS: What do you say to parents who are not Christian? I think you really need Christian grounding to understand the book and the presentation.

DR. KATHERINE ALBRECHT: I think that even if you don't have the grounding and you read the book, because I've had Christian parents, non-Christian parents, and non-Christian high school students, and non-Christian kids read the book and say, "This is bunk," yet I always feel encouraged because I know that the seed has been planted.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: The message has been planted, and someday in the future it will sink in. I mean, how many times have we ourselves said,

“Oh, that’s bunk!” and then later we go, “Oh, it’s happening right in front of me. Maybe I ought to go back and check that out.”

You and I as radio hosts find that all the time where we’ll look at something and say, “That doesn’t sound right to me.” Later when we see evidence of it, we know where to go back to the source to find more information about something that our own experience proves is true.

Whenever somebody reads this book and says, “Oh, that’s a bunch of hogwash,” or whatever, I think, “That’s fine. You’re welcome to say that because we don’t see the mark here right today, but there is going to come a time when you’re going to have the option of putting something in or on your hand and you’re going to remember this.” Hopefully at that time when you see this coming true around you, you will wake up and say, “Oh, yes. That’s in the bible.”

Back in the 70’s, 60’s, 50’s, 40’s, and 30’s everybody grew up knowing this, or knowing about it at least. Whether you believed it or not you at least knew about it. That’s really where I want to get society back to, where everybody knows about it. They may scoff or laugh or disregard, but at least they don’t write things like these recent articles in *Wired Magazine* and elsewhere where they don’t even make mention of Christian opposition or the mark of the beast.

C. AUSTIN FITTS: Right.

DR. KATHERINE ALBRECHT: There was actually an article in *Wired* where they were promoting an actual mark. It was kind of like a cross between a snowflake and a pentagram that you would actually put on your hand. When you shook hands with a friend, it would light up and glow.

They are talking about a literal, physical mark on your hand, and not one single mention in the article was, “Oh, those Christian nutcases are going to oppose this.” There was nothing!

I thought that I would at least rather have them say, “The Christian nutcases will oppose it,” than to have them not even mention it. That

means that young people are reading this and they're not even seeing that there is an issue.

Whether they agree or disagree, that's between them and God. But I feel that it is our obligation and our responsibility as Christians to make sure that they at least know what the bible has to say about it.

C. AUSTIN FITTS: I'll never forget. One of the most charming moments of my life was when I was in a meeting, and there was a young woman there who had moved from the East or West coast and had moved to rural Tennessee. She was slowly in the process of discovering that the world was very different than she knew.

I forget what issue it was. I don't think it was the mark of the beast, but it was something else. When it finally dawned on her that the Christians were right – because we had a board that was mostly Christians, and then some highly non-Christian people – and I looked at her and laughed. I said, “You know, Sally, sometimes us right-wing wackos are right.”

The whole room burst out laughing. It was very funny.

DR. KATHERINE ALBRECHT: It's great! One of the things I love about you and your program, Catherine, is no matter what the topic is, you are informing people. I know you have listeners who are Christian and who are not Christian, but they know that you believe what it is that you're saying and you believe where it is that you're coming from. Even if they don't share those views, they become informed about them and they can come back later. They can do their own research. They can do their own prayer. They can pray for discernment. They can ask whatever prayers they pray.

They can say, “God, show me the truth.” Really I think all we can do is just be honest and share what we know, and let God sort it out. He will. He does. He's really wonderful that way.

C. AUSTIN FITTS: I have an article called *The Data Beast* and in it I put up the

interview of Aaron Russo talking about the Rockefeller, explaining where this was going to go. Aaron was so credible and such a lovely person and such a caring person.

He's really lionhearted. I think that interview really helps people understand that this is really true. This is really in the plan.

DR. KATHERINE ALBRECHT: The thing about Aaron is he told that to me before he died, and I'm probably the person in his film *America: Freedom to Fascism* that most talked about this aspect of things – the chip implantation, the control of people – and he was absolutely sincere. I think lionhearted is the right term to describe Aaron. What a powerhouse. What an incredible energy and vivaciousness and zest for life and passion for the truth.

He does us all such a tremendous service with that film *America: Freedom to Fascism*. If there's anybody out there who hasn't watched the movie, just watch it. You have to. You must.

Don't even pass go. Just get a copy and watch the film because he did such an amazing service. I think it was really that film – in fact, I know it was that film – that brought about the 2008 election with Ron Paul and that brought Ron Paul's rise to prominence.

After you watch the movie you say, "What can we do?" There was Ron Paul in the movie. I think people said, "What do we do? We elect this man to office."

I remember even at my church somebody saying, "I saw you in a movie."

I said, "Really? A movie?"

They said, "Yes, it was our car mechanic who handed us this video and said we had to watch it."

"I think it was really that film – in fact, I know it was that film – that brought about the 2008 election with Ron Paul and that brought Ron Paul's rise to prominence."

I think people underestimate the sheer number of folks across the country who saw that film and were impacted by that film.

C. AUSTIN FITTS: Oh, I think it was unbelievably impactful.

DR. KATHERINE ALBRECHT: If the Ron Paul campaign could have sent a copy of that movie to every household in America they would have won the election five times over.

C. AUSTIN FITTS: I agree, and it was also the movie where I discovered you. That's where I first learned about you and your work and got your book.

DR. KATHERINE ALBRECHT: Oh, thank you. I'm glad to hear that. Oh, Aaron.

I was in a Kinko's making photocopies of something when my cell phone rang, and it was Aaron Russo. He said in his gruff, gruff voice, "Somebody gave me your name and said I had to talk to you."

I said, "Sure." The next thing I knew I was flying out to Hollywood doing a movie.

C. AUSTIN FITTS: I have to tell you one story. I went to see Aaron in the hospital right before he died, and the reason I'd gone was I had a friend who was also a dear friend of his. I'd met him when we did the movie, but we had a prayer group and we'd been praying for him. We got a lot of very clear communications about him.

I went to see him and he was still struggling, still hoping that he would make it through.

I said to him, "We've been praying, and we've been given a message about your situation. I don't want to tell you unless you want me to tell you, but it's been so clear and it's been coming so often that I wanted to see you."

He said, "What's that?"

I said, “You know, if God does take you home, it’s because he wants to guard your heart. You are so lionhearted that he doesn’t want your heart broken,” because he just kept fighting. It was a very powerful, clear message, and it was coming to multiple people in the group. It was very interesting.

DR. KATHERINE ALBRECHT: Wow! That’s encouraging to me because I know that Aaron – we had a couple of conversations.

C. AUSTIN FITTS: He’s coming back around.

DR. KATHERINE ALBRECHT: Yes. I’m encouraged to hear that. I really am. I was actually at his home with G. Edward Griffin when we did that film.

C. AUSTIN FITTS: Oh, wonderful. Oh my God! I can’t imagine the three of you in a room together.

DR. KATHERINE ALBRECHT: We broke bread. We had a nice meal together, but it was quite the extraordinary experience. It was one of the high points of my life.

C. AUSTIN FITTS: You must have been levitating.

DR. KATHERINE ALBRECHT: It was incredible to have that kind of energy all in one space. It was pretty amazing!

C. AUSTIN FITTS: Before we shut down, I want to make sure you go through again your websites and how we go ahead and get the book. Just run us through how we find *Spychips*. If you haven’t read *Spychips*, you really have to do it.

DR. KATHERINE ALBRECHT: It’s the ten year anniversary version, and I don’t think I changed that much because everything we predicted in there has come to pass exactly or is in progress exactly as we wrote it.

The book is called *Spychips: How Major Corporations and Government Plan to Track Your Every Move with RFID*. Probably the best place to

find that now is just on Amazon. I think you can get it for \$11. It's pretty cheap.

My new book is called *I Won't Take the Mark: A Bible Book and Contract for Children*. *I Won't Take the Mark* is available at www.VirtuePress.com with the beautiful matching frames and the gift package and the gift wrap, or you can find it at Amazon which, again, I'm going to say it in low, dulcet tones there. Amazon, gosh! We could do a whole other show on Amazon and Echo, their new seven-microphone device that they want you to put in your living room that always listens to you and answers all your questions. Yuck!

Anyway, I'm kind of boycotting them now myself, but the book is available there. It's called *I Won't Take the Mark*. My website is www.KatherineAlbrecht.com is my daily radio show. I'm on the air two hours every weekday afternoon from 4:00-6:00pm Eastern, and you can find that at www.KMAshow.com. I also have a 24-hour listen line, so if anybody has a phone and a pen and wants to write this down, you can hear the most recent show. That is 605-562-7703. That's just a number you dial to hear my show.

I have a couple of websites that we haven't talked too much about. We talked about www.StartMail.com, the new private email. We talked about www.StartPage.com, the search engine you should be using instead of Google so that everything that you search for isn't being watched.

The other websites I have are www.ChipMeNot.com, which is actually an anti-animal chipping website. We talk about the research that I did that really put an end to human chipping in the US. We didn't talk too much about that.

C. AUSTIN FITTS: That's a wonderful article. You should mention the name of that article. Oh, yes.

DR. KATHERINE ALBRECHT: Yes, we showed that implantable microchips cause cancer in between one and ten percent of laboratory animals. I've

got a whole article there at www.ChipMeNot.com along with pictures of the horrible tumors on the animals and the awful things they've suffered.

If anybody in the listening audience has had an animal develop cancer around a microchip, please contact me. We would like to get your story and include it on the www.ChipMeNot.com website. Tragic though it may be, it can probably help somebody else.

Then there is www.AntiChips.com. That is my website on opposing human chipping. The www.AntiChips.com actually has a piece of legislation called the 'Bodily Integrity Act' which is a one-page PDF written in plain English that you can print out and hand to your lawmaker and ask them to please introduce this bill because what it is is it says basically that no one under the age of 18 should ever be implanted, and no one should ever be implanted against their will, and no one should ever be discriminated against for their refusal to receive an implant.

That is the Bodily Integrity Act which is at www.AntiChips.com. It is also where you can see the candlelight vigil and protest and march that we did outside the Alzheimer's Community Care Center that basically put an end to human chipping.

That's www.AntiChips.com, www.ChipMeNot.com, www.KatherineAlbrecht.com, www.StartMail.com, and www.StartPage.com, and the new book is www.VirtuePress.com.

That's a lot.

C. AUSTIN FITTS: I feel like the last time I saw Tina Turner in concert. I turned to my friend and said, "What's my excuse?"

You get more done in a day, Katherine Albrecht, than anybody I know.

“...what it is is it says basically that no one under the age of 18 should ever be implanted, and no one should ever be implanted against their will, and no one should ever be discriminated against for their refusal to receive an implant.”

DR. KATHERINE ALBRECHT: Thank you. I've definitely been working hard for 15-16 years, but my next project is going to be a book about the breast cancer that almost took my life between 2011 and 2012.

C. AUSTIN FITTS: I know. You beat that, too.

DR. KATHERINE ALBRECHT: That was a big thing. That's my passion – to help other women stay safe and keep their lives if they are diagnosed with cancers.

That's next. I'll let you know when that happens.

C. AUSTIN FITTS: This comes with prayers for every success in this book and in writing the next one. We wish you all the best. Thank you again so much for being on The Solari Report. You have a wonderful day.

DR. KATHERINE ALBRECHT: Thank you, Catherine. God bless you, and God bless your listeners. Thanks so much for all you do.
