# News Trends & Stories, Part II

July 14, 2016

---

**C. Austin Fitts:** I have to tell you that at the beginning of the year when we published *Space Based Economy* as the Wrap Up, I said to myself, “This is really pushing the envelope. It’s very forward.”

Then, in fact, what happened was we’ve seen for the first half of the year and very much in the second quarter an explosion of space everywhere.

**Dr. Joseph Farrell:** Oh, yes. It’s all over. In fact, we’re recording this on the 28<sup>th</sup>. I spent most of this week’s blogs talking about space based or related stories. The space stories have been incredible. I think I mentioned in the first part of the interview the fact that India had just concluded a blistering round of launching satellites. I think we’ll get into it later, but I just want to clue people in that there is a big geopolitical game going on right now regarding space, and we’ll get into it as we proceed.

**C. Austin Fitts:** The thing I find fascinating is if you take all the Asian space programs and count up how many people are working in them and then you look at the explosion of space start-up companies in Asia, it’s extraordinary. I mean, the reality is Asia can produce far more engineers far faster than we can.

**Dr. Joseph Farrell:** Yes, absolutely. Right now you have a very interesting situation that’s been emerging. Let’s go all the way back to a month before the Chelyabinsk meteor incident in Russia. A month before that incident occurred, the Russian Prime Minister Dmitry Medvedev gave an interview on Russian television where he stated that Russia should press internationally for international cooperation in the creation of a planetary asteroid defense system, but that if it couldn’t get that cooperation, it should press ahead with its own system of detection and defense against asteroids anyway.

**C. Austin Fitts:** Wow!

**Dr. Joseph Farrell:** Right. Then you had the Chelyabinsk meteor incident. The Russians rammed through their duma a bill to create a Russian system for asteroid detection and defense. They've been bringing that system slowly online over the past year if you've been following the stories.

Then you have countries like India launching this blizzard of satellites. The European Space Agency just this last week – and I have a three-part blog coming up about it beginning tomorrow – has come out with a plan to position a new international space station at the eco-gravisphere – the neutral point of gravity – between the Earth and the moon. In other words, this thing would be much closer to the moon than it would be to the Earth. This would be a platform for further space exploration for lunar exploration.

Dmitry Rogozin of Roscosmos, the Russian space agency, has come out with a plan for a permanent Russian colony on the moon, starting the construction robotically and so on. China, as you pointed out in your outline, is wanting to develop a mission to Mars by 2021. In this country you've got very interesting, very peculiar things happening in space. Let me give you two examples of what has been happening – and I blogged about this.

A few weeks ago General Kenney spoke to the US Air Force Academy, and he said that the soldiers of the future are going to have to be prepared to fight “little green men”.

**C. Austin Fitts:** And he didn't mean leprechauns either.

**Dr. Joseph Farrell:** He didn't mean leprechauns, and then I thought, “That's interesting.” I got a bunch of comments about the blog that I wrote about it. Well, that's just code in the military for Russian Spetsnaz units in the Ukraine.

My response was, “No, that's not code for Russian Spetsnaz units in the Ukraine; that's code for little green men” in the colloquial sense.

A four-star General of the United States Army knows what that phrase is going to mean popularly.

**C. Austin Fitts:** Right.

**Dr. Joseph Farrell:** You've also seen US Army recruiting films. I include this in the blogs that start tomorrow about the space story. They include scenes from films of soldiers fighting aliens. Then it ends its recruitment ad with a reference to the movie *Independence Day*.

So space is definitely in the news. Also in the news that is space-related has been studies that are taking place – and I find this tremendously interesting, Catherine, in view of the geopolitics that we just got done discussing in part one, and here is why: They're doing studies now of what the government system should be for permanent human colonies on Mars. The studies are being conducted in the Netherlands – I think largely under the auspices of the European Space Agency, which means France and Germany of course. The interesting thing about the study is that it concludes that in order for there to be a workable viable system of governance, you're going to have to endow it with a great deal and measure of sovereignty. In other words, you can't have a bunch of people back on Earth in Houston or Kazakhstan or wherever beaming up instructions.

**C. Austin Fitts:** Centralization is not going to work on a multi-planetary basis.

**Dr. Joseph Farrell:** Centralization is not going to work here. That's right. This article goes so far as to say a permanent human presence on the moon – Japanese and Brazilians and Indians and Russians and Germans and French and Americans – a colony like that is eventually going to consider itself 'Martian' rather than their nationality that they're from Earth or what have you. Then the real fun begins.

So I'm looking at all these developments, Catherine, and I'll tell you what my gut instinct and intuition here is. Space is proceeding so rapidly now, as you point out. The Asians are simply outnumbering us in terms of engineers that

**They're doing studies now of what the government system should be for permanent human colonies on Mars.**

they can produce.

You've got three working space programs – very good ones – already in India, China, and Japan. Particularly the Japanese are the ones to watch. They're the quiet ones, but they've got the technology. They've got that big satellite up that was about as big as a school bus orbiting the moon recently and sending back all sorts of interesting pictures which the Japanese Defense Ministry promptly classified. So that was a little signal.

You look at the story, and the ESA's plans and the Chinese plans and the Indians launching this flurry of satellites in a week, and what it appears to me that you're watching is you're watching Mr. Global attempting to project their plans or shift the basis on which they want to impose their centralization plans into space.

What is happening is you're looking at the response from the non-American space agencies clamoring to get up there as fast as they can. This is what I think this Indian satellite business is all about. This is what I think the Roscosmos announcement is all about, and that was the clue because Rogozin in Russia said, "This is our plan, but obviously we can't afford to compete with NASA because they're so far ahead of us."

So what Russia is announcing and what Rogozin is cleverly saying is, "We're doing this to position ourselves with the other space powers, to insist that space is not going to be a unipolar thing."

This is where you're going to see the geopolitics change significantly because space is going to be where Mr. Global and his centralization plans are going to be ultimately challenged. You see this reflected in these plans for Martian government and this idea that they're going to create a local tribunal of representatives from the countries that have people there.

**C. Austin Fitts:** I will tell you what I believe: I believe the reason that we kicked off the Uruguay Round of GATT and globalized was that the number one goal was Mr. Global needed much more capacity much faster. We were going to become a multi-planetary civilization, and I think that is Mr. Global's number one priority.

**Dr. Joseph Farrell:** I do, too. I'll tell you something else that I think is a key factor here, although it's so out there and it's so on the end of the twig of high-octane.

**C. Austin Fitts:** That's okay. Be out there!

**Dr. Joseph Farrell:** I think they're in a hurry for a reason. I think they know something that they're not telling us. They've been quietly hinting at it and suggesting it in statements like General Kenney with the little green men and the US Army recruitment video.

**C. Austin Fitts:** Here's my vote for what they are worried about, and I have a number one and number two. I think the number one threat is geophysical; it's the deterioration of the magnetic field. I think the number two is the little green men.

**Dr. Joseph Farrell:** Yes. I would flip that. I would say my number one concern that I think they're concerned about is the little green men, and number two is the geophysical deterioration – although I have suspicions about what that geophysical deterioration is all about. I don't think it's natural or cyclic; I think this is something that they've been up to for a while.

**C. Austin Fitts:** You think it's the little green men?

**Dr. Joseph Farrell:** I think it's because of the little green men, yes. The chemtrails and spraying, you have to remember that a lot of that stuff is particulate heavy metal. It looks to me like what they're doing is they're increasing the electrical cavity of the Earth's atmosphere. That means two things: They are trying to create an artificial shield in case the magnetic field gets so weak that it collapses. I don't think so; I think that's simply cyclic. I think the real reason is because that becomes a much better conductor for electromagnetic weaponry purposes. They're weaponizing the planet if I can put it bluntly.

**C. Austin Fitts:** Right.

**Dr. Joseph Farrell:** I think that they're aware of something that they're not

telling us, and they're in a big hurry to get out there. This is the reason why they want their asteroid detection defense system. That is really an excuse to weaponized space in a major way, and I think they're in a hurry to get to Mars and back to the moon because those are – from a purely military point of view – those are the bases you would need for any sort of workable inter-planetary defense system, especially if you've got something that you're expecting coming from the outer solar system or outside the solar system. This is what you would want.

I think you're looking at that behind the scenes. I realize that is quite a whopper and a doozy of high octane speculation.

**C. Austin Fitts:** The whopper and doozy of the quarter – if you were going to have something really far out – was the Islamic pronouncement that encouraging people to travel to Mars was against Islamic doctrine. They declared a fatwa on Mars space programs.

**Dr. Joseph Farrell:** I know. Talk about being backward. If you want to be left behind, then have your medieval, barbaric, unreconstructed, unreformed religion. (Don't hold back, Joseph. Tell us what you're really thinking.)

**C. Austin Fitts:** Remember we're talking about a part. I have to tell you that many advanced, wonderful, fantastic members of Islam.

**Dr. Joseph Farrell:** Right. They have scientists and mathematicians as well who would think that's just nuts.

**C. Austin Fitts:** To a certain extent, we're talking about the radical group ceded by US intelligence agencies.

**Dr. Joseph Farrell:** Exactly. It's a nice way to keep potential competition on the ground.

**C. Austin Fitts:** So let's turn to blockchain because blockchain is something I spent a fair amount of time trying to understand in the second quarter. I don't pretend to have mastered it. I think the impact of blockchain on the financial system is going to be quite extraordinary.

We're talking about a system of technology that can create a distributed ledger system. So literally you have financial institutions all around the world that can simply settle with each other directly with no intermediaries or payment systems.

**Dr. Joseph Farrell:** Right.

**C. Austin Fitts:** It's one of the reasons I use the quote from the head of ING that says, "Our customers need banking services, but they don't necessarily need banks."

**Dr. Joseph Farrell:** And there is no opportunity for malfeasance there, is there, with the distributed ledger?

**C. Austin Fitts:** It's interesting because there are many people who believe in this technology who think it's totally encrypted and it's safe, which I'm of the view that Mr. Global doesn't like technology out of the lab unless he's got a back door.

**Dr. Joseph Farrell:** Right.

**C. Austin Fitts:** I don't believe that it is truly encrypted; I think there is going to be a back door.

**Dr. Joseph Farrell:** I do, too. When you first told me that this is a distributed ledger, that just sent my suspicion meter into the red zone. I think ultimately, especially in terms of this idea of the hidden system of finance, a financial system has to be dependent on the actual physical movement of a physical medium of exchange. I think this is how they've managed that hidden system of finance.

The problem here that bothers me in conjunction with space is I think, too, as you've suggested that what they're doing is with this competition. They're trying to build out systems redundancy as fast as they can because relying on NASA or the unipolar approach to things just hasn't worked. If anything,

**We're talking about a system of technology that can create a distributed ledger system.**

NASA – since the end of the space shuttle program – has just been a moribund, do-nothing institution. You're seeing this redundancy built into the system, and I think that's for a reason.

You build redundancy into the systems for one simple reason: That's either catastrophic failure or military interdiction. When you consider India's sudden flurry, it's looking to me like they're building redundancy into the system because they are expecting for one of those two things.

**C. Austin Fitts:** Here's the thing. If you need to decentralize for economic reasons, then having all the data in your cloud is the way you maintain central control while you're decentralizing.

**Dr. Joseph Farrell:** The other thing I think they're doing this for is precisely for space-related reasons. If you're going to have permanent human colonies on the moon or Mars, you've got to have some sort of system of financial clearing with the distributed ledger that will allow you to conduct trade in commerce over those great distances. So I think this is a part and parcel – as you put it in your outline – of why you've got to look at all of this in toto rather than this not really being connected to space, and space isn't really connected to that.

I think you're looking at two halves of the same coin here. I think this is precisely the reason that they're experimenting with these systems; they need it for space and for commerce to be conducted.

**C. Austin Fitts:** Right. Let's turn to health. Health and what is happening with technology in the health area is very significant. We saw in the second quarter a huge brouhaha. In the first quarter Trump brought up the issue of heavy schedules and the relationship to autism, but we then saw *Vaxxed*, the documentary, spiked by the Tribeca Film Festival, and then Robert De Niro giving powerful interviews on TV and the documentary taking off.

This was all coming on top of a real push to mandate vaccines in the schools, including in California. So we really see both on the biotech side and on the vaccination side health issues really coming to the fore all at the same time we're dealing with the Obamacare reengineering. And as you and I both know,

“It ain’t working.”

**Dr. Joseph Farrell:** No it isn’t.

**C. Austin Fitts:** Something is going on in the area of health freedom. To me, if we blow up anywhere for the next year, this is where it’s going to be.

**Dr. Joseph Farrell:** Yes, I think so. I think you as well know people personally who have had either people in their family or they know close friends who have been struggling with an autistic child and meeting the bills. I’ve had personal experience with people like that who have been on various medications and dependent on the government.

My favorite example is I used to have a friend who required medical marijuana. This individual had a prescription of 30 pills or something like that a month. It cost \$1,700 for that bottle of pills to get medical marijuana in a form acceptable to the government when a \$50 bag would have done him just as much good.

In other words, I think the vaccine issue here really boils down to big pharma and mercantilist policies and the fear porn on television and radio of this flu vaccine and that flu vaccine with swine flu. One year it was bird flu. The next year, “Get your vaccine.”

I’m one of those people who never gets the vaccine, and I don’t get the flu. I look at people who get the vaccines, and they’re sick for a few days, and then they’re tired, and then they’re run down.

Autism and the vaccines, as far as I’m concerned, has a link. I don’t think you can be informed about the literature and not come to that conclusion. Putin is raising this issue. When you start mandating these vaccines for little babies and requiring it for attendance at school – no.

Again, this is where the states are going to have to stand up and just say no. If you’re state is considering it, move to another state. It’s time to get out of that state if they take away your sovereign right.

**C. Austin Fitts:** That is the question. Will a state Governor play a Putin and say, “GMOS and vaccines. We’re going to offer a choice?”

**Dr. Joseph Farrell:** Exactly. Again, states are going to have to say no to Washington and to the big corporations, and they’re going to have to understand that the corporations, particularly ‘MonsterSanto’ as I like to call it or ‘IG Farben Santo’, are going to come after them. We saw this happen in Hawaii. We see it happening with Vermont.

Again, it’s time for people to hold the feet of the politicians to the fire, and it’s time to reregulate those agencies and make sure that they have some teeth and require that the people who are staffing them are not a revolving door between Archer Daniels Midland and the FDA and so on and so forth. Enough is enough.

**C. Austin Fitts:** I should point out for the people who don’t know, part of the *Vaxxed* documentary is a CDC whistleblower who comes out and gives testimony to the fact that the CDC has been manipulating and suppressing data.

**Dr. Joseph Farrell:** Exactly.

**C. Austin Fitts:** I would also point out during this quarter the global life expectancy increased, but it decreased in the United States.

**Dr. Joseph Farrell:** So much for our healthcare. Seriously. This is where the states are so important – or if you’re in Canada, the provinces. The whole reason the United States is behind and wanted the EU was it was much better for us to manage and deal with one bureaucracy than several. Well, it’s the same thing with corporations and the Federal government here. They don’t want states to have say-so because it’s easier for them to deal with a centralized government. But they’re not going to look out for the health of your children; they’re going to look out for their bottom line, and that is the bottom line.

Again, you can’t have a functioning economy if you don’t have trust and if you don’t have health.

**C. Austin Fitts:** One of the reasons the realtors and the home builders

wanted me fired from FHA is because I insisted on delegating a huge amount to the field office. I said, “Look, all real estate is local,” and they wanted a national policy on everything because it made their life much easier. It was very convenient for them.

**Dr. Joseph Farrell:** Exactly.

**C. Austin Fitts:** Okay. Zero integrity systems. This, as you know, has become an obsession of mine. As you read the business literature and the corporate literature, you have a whole world of functions that are planning on using digital system in the cloud to execute and reengineer almost every function in our lives, and yet if you look at the cost of cybercrime and the growth of cyber hacking, the systems have absolutely no integrity.

**Dr. Joseph Farrell:** No, they don’t. I’ll tell you something very interesting in respect to that. I just had a blog on my website called ‘Russia to develop teleportation technology in 20 years.’ This is part of a strategic study plan for Russia.

One of the things they want to do is beef up their cyber industry. They want to beef up their cyber hardware and software industry. I suspect the reason why is that they have some of the best hackers in the world in Russia, and they know the Western cyber systems are not secure.

I deal with so many computer problems. They are so bizarre; they can’t all be coming from my computer. This idea of having everything in the cloud, you know my philosophy on e-books. To me they are an abomination because they change the author’s intended formatting of a book. I don’t trust Amazon to preserve the intention of my text. I don’t trust any bank with executing trades or billing me automatically. I’m still a paper check guy, and I refuse to sign up.

“Cut your bills by 35% if you sign up for our automatic debit system.” No way. I’m not letting anybody into my accounts.

**You have a whole world of functions that are planning on using digital system in the cloud to execute and reengineer almost every function in our lives.**

**C. Austin Fitts:** Actually, I trust my bank. I use paper checks, but I do trust my bank. I bank with one of the smallest banks in America.

**Dr. Joseph Farrell:** Yes, I small with a very small bank, too. I will not use electronic debit and so on and so forth. I mean, I will use a debit card, but that's not what I'm saying. I simply don't trust these systems because – like you said, Catherine – they have no integrity.

This brings us back to that blockchain story. Given the malfeasance that we've seen perpetrated by Mr. Global and the corporate fraud and the corruption that we've seen in the last 30 years, are we really going to trust that kind of system with our money?

**C. Austin Fitts:** I don't.

**Dr. Joseph Farrell:** I don't either.

**C. Austin Fitts:** What I'm always astonished by is the number of technology people who come to me and say, "Look, this is a serious alternative; it's safe."

**Dr. Joseph Farrell:** No. It's not safe. There is no unsinkable ship. We heard this more than 100 years ago with the Titanic. "God Himself could not sink this ship."

Well, you're tempting fate when you say things like that, folks. There have been unsinkable ships and there have been invincible weapons, and there is always a way around them. There is no such thing.

**C. Austin Fitts:** So this brings to me to what I think is one of the most important stories right now of what is happening today. I linked to a story called, 'Why this golden era of innovation is an improving productivity.'

Basically what we're saying is that we have all this dazzling technology, and all it's doing is helping a few people centralized and create an enormous inequality. It's destroying trust, and of course it's destroying productivity.

**Dr. Joseph Farrell:** Yes. Again, I saw in your outline that you also had

articles about ‘Anonymous’ and other groups cyber-hacking central banks.

**C. Austin Fitts:** Right.

**Dr. Joseph Farrell:** A year or so ago it was Sony. These systems are not secure. What they’re doing is, as you say, they’re creating a lack of trust. When there’s lack of trust, what do you do? You hoard the money. So the technology isn’t helping us here. There has to be a way of getting through to people that good, old-fashioned paper checks are not a bad thing.

The Federal Reserve tried to move us in this digital direction when it quit sending our cancelled checks back to us. “We’ll send you copies if you ask for it.”

No. It’s not creating trust; it’s not generating productivity. What it’s doing is it’s generating distraction. This is what bothers me about it, Catherine. I refuse to have a cell phone or an iPad or anything like that because it’s just one gigantic distraction. Social media is just a gigantic distraction for the most part. People have to get away from the tube and get away from their iPads and read a book or paint a picture or make a widget in your garage and sell it to your neighbor. Do something rather than be passive. This technology is killing us.

**C. Austin Fitts:** We’ve been working this year on our garden again. If you need a hobby and you enjoy it, building a local food supply is a really great investment right now.

**Dr. Joseph Farrell:** Absolutely.

**C. Austin Fitts:** We don’t want to end up like Venezuela.

**Dr. Joseph Farrell:** No, we don’t.

**C. Austin Fitts:** Let’s turn to The Big Questions.

**Dr. Joseph Farrell:** Right. We did the small questions, folks. Now we’re doing ‘The Big Questions’.

**C. Austin Fitts:** I describe the campaign this year as the Richmond Valentine

campaign after the Silicon Valley billionaire character in the *Kingsman* who used entrainment technology. I keep asking the question, “Who or what does Richmond Valentine want?”

In all the divide and conquer games you’re seeing America’s confidence in its institutions at near an all-time low.

**Dr. Joseph Farrell:** Oh yes.

**C. Austin Fitts:** That’s why I keep asking the question. Is the goal to break up the country? If we add up all the different things we’re talking about – whether it’s autism at the current rate growing to one out of every two children by 2032, what’s happening with the food supply, what’s happening with the systems, what’s happening with robotics and employment – the question is: Where is this all headed? Who or what does Richmond Valentine want?

**Dr. Joseph Farrell:** Well, you couched the question in terms of a breakup of the country. I think what Richmond Valentine wants is he wants greater centralization, and at the same time he wants to bust the country up into much more digestible, manageable pieces.

**C. Austin Fitts:** Right.

**Dr. Joseph Farrell:** By that I would mean not just individual states, but city-states. They want to bypass the states as much as possible. They want to make everything centralized at the Federal government level, and then lock everybody into their city-state. That, to me, is what they want.

They don’t want productivity. That group of people doesn’t want productivity because when you have productivity, you have creativity, you have imagination, and you have critical thinking. They can’t stand any of that stuff because when that happens, they’re not controlling it.

That’s what I think they want. I think they want to keep people poor. I think they want to keep people distracted with their iPads and not producing anything. I think they want to keep people distracted by transgender bathrooms and, “Is little Suzy or little Mark at seven years old identifying as a

boy or a girl?” and nonsense like this. Any focus on the issues is dangerous for them because they’re stupid. They’re arrogant and they’re stupid.

**C. Austin Fitts:** There’s no doubt that playing in a rigged system can make you really stupid, although in my experience at the top, the operational capacity is quite good.

That brings us to two questions, which are the future of cash and the future of income.

**Dr. Joseph Farrell:** Right. Maybe I’m old-fashioned, but I don’t see, Catherine, how you can have a functioning economy without a real physical medium of exchange. Like I say, I do as much of my financial transaction by paper as I can. That includes, if necessary, writing a check at the grocery store rather than using a debit card.

I’m just a believer in having physical medium of exchange. And physical medium of exchange, as far as I’m concerned, are based on production. There has to be value represented, more than just aircraft carriers and drones and bombs. That’s been the problem.

The backing of our dollar is military power – nothing more and nothing less. You have to have a physical medium of exchange. This idea that everything is going to be cashless and so on and so forth, no. I’ve never gone along with that. I think you have to have money. You have to have physical, tangible securities. You can’t trust a bank to keep everything in its vault and on its ledgers in the form of electronic blips.

And let’s be honest here. What happens tomorrow if China decides to take out America with an electromagnetic pulse weapon? Our computer systems are friend.

**C. Austin Fitts:** You’d better create a local currency as fast as you can.

**Dr. Joseph Farrell:** Bingo! You had better save those bank deposit slips that

**The backing of our dollar is military power – nothing more and nothing less.**

have your bank's name on it with your account number and your balance. I save those things because I don't trust these institutions.

I mean, I trust my little credit union here where I live, but in general I don't trust these institutions. It's time that we get back to the old Jeffersonian principle that you look to yourself and trust yourself first, and be skeptical of other people watching out 'for your best interest' because they're not going to do it. I'm firmly Adam Smith on that camp.

You have to have physical media. If that happens, you have to have a means to create a local currency really fast, and it has to be a physical media of exchange.

**C. Austin Fitts:** The Swiss rejected the proposal to give a basic income to every adult and child. I know they do have a basic income for a retiree, so there is some form, but you see enormous conversations globally about artificial intelligence and robotics and what it's going to mean to incomes globally.

**Dr. Joseph Farrell:** Right. Well, again, I don't think that those technologies need necessarily represent the demise of human production. I think we need to start thinking in terms of, "Well, if these technologies are coming online, that frees us up to do something with our own time."

**C. Austin Fitts:** Right. Exactly. Like go to Mars.

**Dr. Joseph Farrell:** Right, like go to Mars or plan how to get there or write a symphony or do something – produce something. Enrich the world rather than just being passive before it.

I don't see these technologies the way the globalist elites see it. This just means you're going to have a big, huge population sitting around and doing nothing and demanding their check. I think it represents the opposite. I think it represents a tremendous opportunity for creativity if we'll seize it and not let them seize it for us.

**C. Austin Fitts:** You have to let capital flow freely; you can't centralize the capital so it all flows to large corporations. You have to let it flow according to market economics so that the people who no longer need to be doing what

they were doing have the capital subject to productivity to do something else.

**Dr. Joseph Farrell:** Exactly.

**C. Austin Fitts:** And that's what we've done in this country. We have systematically denied and shut off capital to people who are being reengineered out of what they're doing, and we've made sure that they couldn't get their hands on capital to do something new, or we've made it extremely difficult.

**Dr. Joseph Farrell:** Absolutely. This is where going back to local solutions is prime because if the Federal government is not going to do this or JP Morgan Chase isn't going to do this, the states and localities should step in and do it. That goes back to your idea of equity financing again.

I think the opportunity is there for that sort of approach if people recognize it and seize it rather than let the government and the corporations dictate to us how they're going to seize the opportunity; just go out and seize it and take it away from them.

**C. Austin Fitts:** Here's how the economy works: When people get laid off, they can get money from the government to do nothing, but it is illegal for them to access equity capital from their neighbors to create something new.

**Dr. Joseph Farrell:** Right. That has to change. You should be able to take that money from the government and be able to kick-start a business or something and get off the government and search for sovereignty again. Absolutely.

**C. Austin Fitts:** One of the stranger things that happened this year was the announcement that a Temple of Baal arch was going to go up in Trafalgar Square and in Times Square. I called you and I said, "Joseph, what is this?"

We now see that the arch was cancelled in Times Square. Apparently too many hackles were raised.

**Dr. Joseph Farrell:** As I told you at the time, that's just the elite declaring who their God is. I'll tell you what is going on with the elites that just nauseates

me, and that is I heard a story where Chancellor Merkel and President Hollande came together at Verdun in France. One hundred years ago right now this year, we were fighting World War I – at least the French and the British and the Germans and the Russians and the Austrians were fighting it, and we were thinking about getting in – thank you, Mr. Wilson.

Verdun and the Somme in 1916 were two of the bloodiest battles in human history. At Verdun Frenchmen and Germans gave their lives in the hundreds of thousands.

Hollande and Merkel got together for this memorial at Verdun, and the memorial was this typical new modern, new age, neo-nastic celebration of paganism, the occult, the devil, and all of this nonsense. I thought to myself, “What unbelievable gall,” not to coin a pun, “that these two leaders would participate in a ceremony to commemorate Frenchmen who are fighting for their culture and their freedom and Germans who are fighting for their culture, which had nothing to do with the memorial that was given for those men who lost their lives – nothing to do with that.

Whatever we say about Kaiser Wilhelm, he was not a new age pagan. Whatever we say about George Clemenceau, he was not a pagan.

The elite parade their disdain and their contempt for the Judeo-Christian and humanistic basis of this culture at every opportunity they can, and it’s time to tell them, “No. Go to mass,” or, “No. Go to your Lutheran church,” or, “Go to your synagogue.” If you’re not inclined to do that, then be a part of that great tradition of Western humanistic culture that is tolerant of its other basis.

**C. Austin Fitts:** Or if you want to have a cult of rituals, fine, but do it on your own time. Don’t do it on our time.

**Dr. Joseph Farrell:** Right. Do it on your own time, not on our money, because you don’t represent us.

I was thoroughly disgusted and nauseated. When I read that story about the Temple of Baal arch that you sent me, I thought, “They’re at it again. They’re declaring where their allegiance really is,” and their allegiance is destructive of

the basic virtues and monuments and traditions of this culture, and they're proud of it, and they flaunt it. It's time to tell them, "No, you don't represent us. Go have your rituals in your local lodge; don't bother us with it."

I saw that hideous ceremony that they had at the opening of that tunnel, and again, I'm thinking, "Has Europe lost its mind? Have we lost our mind?"

**C. Austin Fitts:** It's not just Europe. This is exactly what got me to leave Washington in 1998. I was trying to get away from the perversion. It was just too unnatural, and it was just too unhealthy. It was the scorpion and the frog, and I just said, "This can't win. This is going to lose."

**Dr. Joseph Farrell:** I had the same feeling any time I've been in Washington. I avoid the place because I feel that same perverted, unnatural, untraditional feeling. It's so thick in the atmosphere in that city; you can cut it with a knife.

It is so out there and so bizarre, and they flaunted this in the churches. They've pushed these changes in the churches from their traditional ritual or confessional moorings. They do it at every turn they can, and it's time to call a halt to it. For those who don't have that kind of philosophical or theological or metaphysical inclination, there is also that great humanistic tradition in Western culture that they're also flaunting.

It's time that these people just be told, "Knock it off. We don't need another pagan spectacle."

**C. Austin Fitts:** You think Trump is weird, what about this?

**Dr. Joseph Farrell:** Right. If you think Trump is weird, these people are just plain nuts.

I spent a great deal of time in my 9/11 book reviewing a book by S.K. Bain that examines 9/11 solely from the standpoint of its self-evident occult ritual aspects, and it's a scary book. I mean, just the little bit I reviewed in my book doesn't even really skim the surface of his book.

These people flaunt it at every turn, and that means their allegiance isn't with

goodness or virtue or trust or anything like that. They feed their own narcissism with this stuff, and it's time to call them out on it and say, "Enough is enough. We're tired of it. If you want to do this sort of stuff, practice it in your lodge; don't bother us with it and shove it in our face. After all, this is supposed to be freedom of religion, so quit pushing this stuff on us at every turn and using our tax dollars to do it."

**C. Austin Fitts:** I've posted these stories under the question: Economy – open or closed? I've asked for a couple of years now the question of, "Is the economy open or closed?" because I have to tell you that if you look at how the markets are behaving, it's behaving much more like an open economy than a closed economy.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** The reality is that if we can't keep financing the drops in productivity with more government debt, and we have to reengineer to something productive, the reality is that we have to address the secrecy and the privilege coming from it and wherever all this money is disappearing to.

**Dr. Joseph Farrell:** Absolutely.

**C. Austin Fitts:** I don't see how you get real structural reform without transparency about what I call 'the tithe'.

Planet Earth is behaving like a REIT. We're sending the dividends someplace. Where is it going, and what does that have to do with everything? It's a question you keep asking. I keep asking. I'm just trying to make it a financially fashionable question to ask and discuss.

**Dr. Joseph Farrell:** I think it should be a financially fashionable question to discuss, and I'll tell you why. Somebody has the ledger book.

**C. Austin Fitts:** Right.

**Dr. Joseph Farrell:** Somebody is keeping the account book, and I think what's going to need to be done is in this global movement of revolt against

centralist Mr. Global is the financial question needs to be injected into that conversation. That is number one.

Number two, we are going to face what I call the ‘Philippe le Bel’ moment of history. Just to refresh everybody’s memory as to who he was, he was the king of France who sent out secret orders to his sheriffs, essentially, that on such-and-such a time on Friday the 13<sup>th</sup> of October they were to go raid and arrest the local Templar lodges and seize all their documents and property.

That’s going to be what has to be done. As soon as it’s determined, and you have to look for who’s keeping the ledger – and I have my suspicions and I imagine you do, too.

**C. Austin Fitts:** What’s in the Vatican library?

**Dr. Joseph Farrell:** Well, that’s one place to look, yes. You’re going to have to have that kind of action taken. The ledgers have to be opened and the truth has to be told because I think the other thing that we’re witnessing here, Catherine, is the self-destruction – if nothing else – of this hidden system of finance.

I think it’s becoming too obvious. I’ve seen too many financial analysts in the emails I’m getting now that are beginning to question just what is going on. Why are our predictions not ever coming true? There is something else happening here.

**C. Austin Fitts:** Exactly.

**Dr. Joseph Farrell:** I think the more people can inject that into the conversation, “Where has all this money been going? Exactly where has it been going? And who has been responsible for handling it?”

Once people start asking those questions, I think things are really going to bust open. I really do.

**C. Austin Fitts:** I agree with you. If the dollar is losing its reserve currency status, then the source of the subsidy to buy everybody off is going away.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** That is going to open things up, and it's going to give tremendous power to whoever got the \$40 trillion. There's no doubt about that.

**Dr. Joseph Farrell:** I'll tell you what my suspicion is on how this is going to unravel. I suspect that you're correct that we're going to see major banking business reform or skullduggery beginning to surface in the next few quarters in Europe. I think it's going to center around Deutsche Bank, and little parts of it have begun to open up.

The Italian banker death that the Italians are very suspicious of – and rightly so in my opinion.

**C. Austin Fitts:** We just had the second Zurich Insurance executive commit suicide.

**Dr. Joseph Farrell:** Yes. I think this whole thing is connected deeply to this hidden system of finance idea.

**C. Austin Fitts:** Right. I agree.

**Dr. Joseph Farrell:** I think once this starts to unravel – and I think it's going to unravel at Deutsche Bank – it's going to travel like a thunderclap. I think you're going to see some major banks and insurance companies and so on involved in this. I think as a result of it you're going to see nothing but smiles on the faces of Mr. Putin and Mr. Xi in China. I really do. I think this whole thing is set to come out not necessarily in toto. I'm not saying that, but I think there will be enough dots coming out that people who are following the story very carefully can piece together the rest of the story.

I think Europe is going to be hugely significant in this respect in the coming months. Absolutely.

**I suspect that you're correct that we're going to see major banking business reform or skullduggery beginning to surface in the next few quarters in Europe.**

**C. Austin Fitts:** Well, it's been an interesting second quarter. Any other thoughts on the third quarter and what you think is coming up?

**Dr. Joseph Farrell:** Oh, boy! Other than that story, I can't think of anything. I'm sure the moment we hang up the phone I'll think of it, but to me that is the huge story. I think other than this possible beginning of the unravelling of that system, which I think a certain segment – and not all of the segments of Mr. Global, but the decentralizing segment – will be taking a hand and making sure it happens. I don't think they're too happy about the way that Mr. Rockefeller and the other groups have been running things lately.

**C. Austin Fitts:** It's interesting because you point out that there is going to be a real brouhaha around the European banking system, and I absolutely agree with that. But the other place that you're going to see a brouhaha is all the plans to increase productivity in state and local government – in healthcare and in education – is not working.

I think one of the most significant things that is going to happen in the next quarter for you and me is your book on Common Core is going to come out.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** It's publishing in August. It's publishing before the election. If you look at the fury over Obamacare, we see the Republicans coming out with a new plan. The fury over Common Core is exploding from what I see here in the heartland.

I think this push for productivity in this area is obviously not going to get more productivity; it's doing the opposite. But that is coming to a head as part of this campaign, and your new book is going to come out right in the middle of it.

**Dr. Joseph Farrell:** Oh, I hope so. The Common Core thing to me is, again, all about productivity in a certain sense because what they're trying to do is they're trying to remove the teacher from the classroom in gradual steps. They're trying to reduce the teacher to merely being a proctor of an exam and a reviewer of texts that the corporation supply, which to me is just an

anathema to turn over history or geography or philosophy or mathematics to Pearson rather than to people who know their subject matter well and know it from the historical sources.

**C. Austin Fitts:** As bad as that is, I think it's much worse that they're trying to remove the IQ from the student.

**Dr. Joseph Farrell:** Well, this too, but that's my point. I believe that intelligence and education are a reflection of a human interaction. This is really an assault on the teacher's union. This is their way of saying, "We're cutting costs. We're cutting down overhead," and so on and so forth.

No. They're not cutting down costs and overhead in the long term because what they're doing is they're producing a stupid population that's not going to produce anything. Ultimately they're cutting their own throat.

**C. Austin Fitts:** They're also taking control of a very valuable – from their point of view – commodity.

**Dr. Joseph Farrell:** Yes, exactly.

**C. Austin Fitts:** They are going to have direct access to the kids without the intercession of parents, teachers, or principals.

**Dr. Joseph Farrell:** Right. Absolutely not. 'Ausgeschlossen' as the Germans would say. It can't happen, and I'm adamant that the only thing that his is going to produce is a two-tiered society where people who still have enough capital are going to insist on either home-schooling their children or hiring a real honest-to-goodness old-fashioned tutor who takes over the direction of someone's private education. Inevitably that is what is going to happen.

**C. Austin Fitts:** Here's what is happening with all this productivity in the area of government healthcare and education. If you look at the cost of having an autistic child or the cost of having a child who is not functional or productive, what you start to realize is that homeschooling, growing your own food, organizing with your neighbors to finance a farm to grow your food, making the alternative arrangements you need is becoming cost-effective.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** It's becoming cost-effective to drop out of the system as much as possible because the system is so unsafe and so unhealthy.

**Dr. Joseph Farrell:** And so unworkable.

**C. Austin Fitts:** Right. Not to give anything away, but I wrote the forward in the book. I reached the end and I said, "Look, here is the reality; you're going to have to homeschool or send your kids to private school." But you can't do this. You can't send them into this system. It is not safe.

**Dr. Joseph Farrell:** It is not safe. Talk to any teacher who is struggling in the public educational system to begin with, and then add Common Core on top of it, which is standardized testing on steroids, and you end up with a system that cannot educate. It's not that it's inefficient or anything; it simply cannot educate.

The bottom line for me has always been that this whole thing has been about taking the teacher's unions and throwing them to the winds and replacing them with some yahoo from Pearson who thinks that they're going to teach a subject this way, and it's not going to work. It's just absolutely not going to work.

**C. Austin Fitts:** If you cancel the teacher's unions, it's a lot easier to get your hands on the pension funds.

**Dr. Joseph Farrell:** Bingo!

**C. Austin Fitts:** I hate to bring it all back to money.

**Dr. Joseph Farrell:** But that is what it's all about. You're exactly right. It's another harvesting mechanism, and it's another layer of surveillance for the big corporations – for Mr. Gates.

I'm sorry. Mr. Gates can't design a decent, secure operating system. I've been wrestling with his system ever since I've had a computer, and I'm thinking, "This guy is a billionaire?"

No. This is a typewriter that doesn't work. The only reason I'm stuck with it is because most of my programs are designed to run on his system.

**C. Austin Fitts:** Which the NSA is very grateful for, I'm sure.

**Dr. Joseph Farrell:** Oh, I'm sure they are. And I'm sure all the other intelligence agencies are very grateful to the NSA for throwing in with such a bad system because it's so easy to hack.

**C. Austin Fitts:** Let me say one other thing about the third quarter. I'm really looking forward to the third quarter.

**Dr. Joseph Farrell:** Why is that?

**C. Austin Fitts:** I'm really looking forward to the third quarter, and I know you see this with your members, because I have never been in cahoots with more smart, attractive, intelligent people ready to move on and get this fixed.

What they see is they see that the current system is not working, and they have finally reached the point where they realize, "You know something? It's just like Brexit."

I'm sitting in the hearts and minds of thousands of people all around the world. They are just voting to leave with their time and their money. They're just saying, "I'm out of here."

They're checking out.

**Dr. Joseph Farrell:** I have checked out to the degree that I can. I tell people, "I have to pay for cable television just as part of my internet and phone package. As soon as corporations offer me the opportunity to get internet and phone without paying for endless commercials and 500 channels of pawn shops and the tripe and swill on CNN and Fox and all of that stuff, I'm out."

I don't have my cable TV hooked up. I have dropped out to the extent that I'm able from all of this, and I'm trying to create – to the extent I'm able – a community of like-minded people and thinkers and doers and creators.

**C. Austin Fitts:** There are more great people showing up and getting ready to drop into something new.

**Dr. Joseph Farrell:** Yes. Eventually out of that is going to develop a critical mass – everybody thinking and doing the same way – of people who can get in there and really fix things because the current crop are brainless.

As you pointed out when you came to the visit, they're not only arrogant, but they're stupid. I'm seeing articles to that effect now. It's amazing. Almost the same day I had articles from people from this commentator in this newspaper and what have you saying that our political class and our leadership and our financial experts and so on are arrogant and they're stupid, and they are. They are arrogant and they're stupid.

**C. Austin Fitts:** Here is the problem: We have used the official reality for so long that we've forgotten what reality is.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** And the dollar reserve currency has given us the luxury of doing that, and that is now going to come to an end. It's the Brits who are delivering the message, and the message is loud and clear.

**Dr. Joseph Farrell:** Yes. It's the Brits who are delivering the message. I think the French and the Italians are going to deliver the message. The message is being delivered all over the world, and it means that we're going to be forced back on our own resources, and that's not a bad thing.

**C. Austin Fitts:** I wish we had done it ten or twenty years ago, but better late than never.

**Dr. Joseph Farrell:** The bottom line is: It's not a bad thing because what

**The message is being delivered all over the world, and it means that we're going to be forced back on our own resources, and that's not a bad thing.**

made this country great wasn't money. What made this country great was creative people and individuals. It wasn't John D. Rockefeller hiring his thugs to go beat up his competition. It's time to take the Carnegies and the Rockefellers off the pedestal. These aren't heroes; these were basically thugs.

It's time to take them off the pedestal and start revering the people who did create value and did create life and beauty and things. It's time to take those people and give them their due – the Leonard Bernstein's and the James Michener's and the people who have enriched things – and I think that's going to happen.

**C. Austin Fitts:** If you let the creative, productive people rise and back into the leadership positions, it is going to happen.

**Dr. Joseph Farrell:** Yes. The political class won't let that happen, but I think to a certain extent, Catherine, because of what is happening at such an accelerated pace, they are as obsolete as the Dodo bird. I really think that.

I really think the Zbigniew Brzezinski's and the Dick Cheney's and the Karl Rove's and the Hillary Clinton's and the David Rockefeller's and the whole ilk, I think their day is over. I really do. The Brexit vote, like I said, was a referendum on their track record, and their track record is abysmal. It's a failure.

**C. Austin Fitts:** I'm afraid you're right.

Well, Joseph, onto the third quarter. It's going to be interesting times.

**Dr. Joseph Farrell:** Yes.

**C. Austin Fitts:** Thank you very much. You are one of the reasons we live a free and inspired life over here at The Solari Report.

**Dr. Joseph Farrell:** Thank you for having me back on, Catherine.
