

THE SOLARI REPORT

INTRODUCTION

Welcome to The Solari Report.

Today is October 13, 2016.

I am Catherine Austin Fitts and I am delighted that you could join me this evening.

EVENTS –

Great lunch in Dallas

TULSA this Saturday night – Kilkenny’s Irish Pub 7-11pm

[Hold That Date – Farrell Launch Party in Tulsa](#)

THEME TONIGHT: Midianite 101: The Leaks Have Just Begun

Explain Midianite: Bible Judges 6-9

Monica Lewinsky II — only begun – Billy Bush dirt on Trump last Friday, followed by Bill Clinton’s rape and sexual harassment victims, Hillary’s representation of a child rapist.

Sunday Debate – gloves off –special prosecutor and jail – same as vaccine comments common core – breaking the trance.

Another 25 days – potential to come out is significant–
Epstein yet to come – check out Review on TrafficKing –
Question is what they have on video.

I had said reasonable chance that Clinton would not make it to the election. Unless someone dumps out a video on Bill Clinton or her health turns down, it now looks like she will make it – particularly if she preserves her energy.

Despite Monica Lewinsky II, serious issues are being discussed

given state of the economy, serious situation – end of debt growth model

War – shrinking resources/hegemony

Globalism vs. Nationalist

The lack of trust in the corporate media –

Human vs inhuman

Dems blaming Putin; Wikileaks - Podesta investment;

Republican underscoring - Approval of Uranium deal for Russia

President reading a decision on next steps in Syria

IMO who wins depends on military/intelligence to dish out video dirt and rig computer voting machines or turn on the entrainment – impossible to tell which teams covert capacity is strong – either team could win is how it reads to me.

If we really get down to the question of human vs. inhuman it

will be worth it. THIS IS MUCH MORE IMPORTANT THAN THE ECONOMY, OR LOOKING GOOD

Rasmussen

Thursday, October 13, 2016

The full results from Sunday night's debate are in, and Donald Trump has come from behind to take the lead over Hillary Clinton.

The latest Rasmussen Reports White House Watch national telephone and online survey shows Trump with 43% support among Likely U.S. Voters to Clinton's 41%. [Yesterday](#), Clinton still held a four-point 43% to 39% lead over Trump, but that was down from five points on Tuesday and [her biggest lead ever of seven points on Monday](#).

Rasmussen Reports updates its White House Watch survey **daily** Monday through Friday at 8:30 am Eastern based on a three-day rolling average of 1,500 Likely U.S. Voters.

Monday's survey was the first following the release of an 11-year-old video showing Trump discussing women in graphic sexual detail but did not include any polling results taken after the debate. All three nights of the latest survey follow Sunday's debate.

SOMETHING POSITIVE

The rise of the deplorables

by Jon Rappoport

October 11, 2016

Something is happening in America.

Against all odds, people are seeing a coming dawn. In the darkness, new hope. And this hope is not being

manufactured. This is not Obama hope. This is not sly wickedness. This is not wretchedness in disguise. This is not hate and revenge wearing a mask of share and care.

This is what happens, rarely, when millions of decent people have reached the end of their rope. When their common sense about what is being done to destroy their country and their lives will not be denied. Will not be denied.

The Clinton bandwagon of evil is coming apart. She, the one Clinton, is sputtering vapid generalities for all to see, as the programmed machine in her head is running down. The batteries are failing. The archetype of the android with a forever smile is a ghastly mechanical sight.

He, the other Clinton, is taking bitter, bitter medicine. There he was, on television screens across the world, rammed into his seat, frozen in a cold stare at his enemies, who are no longer so afraid of him they huddle in anonymity. The remaining shreds of his self-constructed dignity are being torn away from him in a cyclone of accusation.

They, the minions of the press, are raging in their own nightmare. Dedicated to the Clinton apparatus, and the crimes for which it stands, these mob foot soldiers are running a high fever. Whoever this outrageous businessman leading the charge is, they must destroy him. And time is running out. They have sold their souls, and the balloon payment is coming due.

Herds of so-called progressive Americans, who would take psychopathic murderers into their homes if it would prove their virtue, who are terrified of discovering their own bankrupt pretensions—“oh I am good, I swear on my life I am good”—are trembling. What is happening to their cartoon world? The bubbles are exploding.

Evil money from lizard scum is being poured into an effort to

start a civil war in America. To rip America apart. But suddenly, there is the prospect of the center holding. Men and women of good will are finding their footing and their voices. This election is just one milestone along a road that is being shaped day by day.

America is not a lacerated piece in a board game of global control. America is still its own. Is still a living dream. The ghouls who recoil in horror at glimpsing this dream are moving to the edge of the pit, where they seek power from the abyss. But the abyss is remorseless and has no pity. It swallows whatever and whoever comes to it. Once, America's grand poet, Walt Whitman, sang of the open road, and the freedom that blossomed along its endless course.

These songs never die.

There is no final curtain.

Against all odds, the deplorables are rising.

Lot of these kinds of investments are happening:

Hyperloop One, a US company formed to promote a radical new form of transport, has raised another \$50m and brought in a powerful Middle East backer as it races to become the first to build a workable system.

The latest investment, from Dubai ports operator [DP World](#), takes the total the company has raised to \$160m, though this only represents a fraction of the “billions” it will have to attract to succeed, said Rob Lloyd, chief executive.

The idea for hyperloop transport — moving specially built vehicles inside low-pressure tubes at near-supersonic speeds

over long distances — was touted by Tesla Motors founder Elon Musk in 2013. That started a race between at least three start-ups to turn the idea into reality, though none involve Mr Musk.

To back its hefty financing ambitions, Hyperloop One also named former Uber chief financial officer Brent Callinicos to a full-time position as chief financial adviser. Mr Callinicos was one of the first hires at the ride-hailing company and was instrumental in helping it raise billions of dollars, making it the best-financed private tech company.

Let's Go to the Movies

In *Let's Go to the Movies*, I will review *Pelé: Birth of a Legend*. One theme in the movie is how to get back our *ginga*, which is the creative rhythm of running and swinging on the soccer field, which is the crucial element of *capoeira*, which is martial arts blended with dance, acrobatics, and music. As

one of the greatest athletes of the 20th century, the story of Pelé's early life is both inspiring and instructive for times such as these.

INTERVIEW

“War starts when trade stops.” ~Jack Ma

By Catherine Austin Fitts

This week brings **Part II** of the **News Trends & Stories** of our **3rd Quarter Wrap Up** which is presented throughout October in four parts:

- **News Trends & Stories, Parts I & II:** During the first two weeks of October, we highlight the top news trends and stories with Dr. Joseph Farrell. [Last week in Part I](#), we looked at *Economy and Financial Markets* and *Geopolitics*. This coming week in **Part II**, Dr. Farrell and I will cover *Science and Technology* and *The Big Questions*. Make sure to check our web presentation for the complete listing with links of *News Trends & Stories* for the 3rd Quarter.
- **Financial Market Roundup:** In the third week of October, we will combine a written Blockbuster Chartology from master technician Rambus with Catherine's Equity Overview. Make sure to check our web presentation for the complete roundup of financial market charts on September 30.
- **Theme – Investment Screening: Can We Filter for Productive Companies?-** Finally, we look at our big

theme. We look at the investment screening industry to ask whether we can filter the markets to find fundamentally productive companies. In August, investors in private prison companies found their stock price down by almost 50% because of changing government policies. And Wells Fargo stock is down by 18% this year, in part because of a scandal related to falsification of accounts. As the debt-financed growth model comes to an end, investors in companies that are not fundamentally productive face a new set of risks.

ASK CATHERINE

Dear Catherine

The information that you share not only has changed my life but possibly even saved my life.

First, I have no illusions about how the world works going back to JFK (Dr Mary's Monkey Viruses and Lee and Me), 911 (Dr Judy Wood), Japan Disaster (Nuke power plants have high pressure safety relief systems, the steam that is released powers the water cooling pumps, they don't need electricity for cooling), Dr Gonzales & Dr Bradstreet's work with GcMAF (name a congressman or senator that has died from cancer?). These are just a few of the examples of how the internet can open one's eyes.

Catherine your site is so unique in that it not only informs us

of the world as it is but helps to illuminate in how it could be. I'm writing to inform you of how the information discovered on Solari has changed my path going forward.

I work at a corporate job but also own a small family farm in. I was in the process of getting out of farming when I run upon an article on your site about regenerative farming, putting life back into our soils. After further educating myself, I am the first and currently the only farmer in my county that has converted to biological farming instead of chemical farming. One of the main reasons I had decided to get out of farming was the fact that I could see how the current system was failing, weeds are becoming out of control, becoming resistant to the toxic chemicals. I guess that nature's way of fighting back.

Buckminster Fuller once said, "Change happens when a new model makes the old model obsolescence". When one no longer has to work the soil, no longer needs artificial fertilizer or chemicals and can produce superior results, the conventional farming model is dead. No wonder Monsanto is selling out, or as you said, "cutting and running". Joel Salatin said he believes biological farming could, not would, spread across this country in a little as two years. The change to our world would be profound. Livestock would all be pasture raised (6X more cattle per acre), no need for feedlots or corn for feed. Much of the land would have to be converted to produce bio-fuels (corn = 500 gal ethanol/acre; hemp = 1,800 gal ethanol/acre) and thus many small bio refineries with millions of rural jobs.

Health, because of your site I have changed my diet to a

ketone in diet, high fat, moderate protein and very low carbs. Result, blood pressure dropped, blood sugar dropped and I have lost 15 pounds so far.

When you published the annual report and had a picture of a person on a bike with the title of " breaking away" , I did not understand at the time how that could apply to me. I now understand and have a new surge of energy and excitement for the future, not only for myself but for my family, friends and people throughout the world.

From what I have learned, there is no need to wait and hope for the release of new technology before the world can change. With current available knowledge we can produce cheap local organic food, locally produced ethanol fuel for between \$.10/gal (hemp, once legalized) or \$.50/gal (corn) and turn the food pyramid upside down (high fat/ low carbs) to protect and improve our health by lowering our inflammation.

Bottom line, turning off the TV and logging into Solari will change your life, how you perceive the world and quite possibly help change the world to model that almost everyone of us would like to see.

God Bless You Catherine

PS, see you in Tulsa!

Dear Catherine,

Could the long standing gun violence be electronic entrainment? The 2013 This American Life examined teen gun violence at Harper HS Chicago. It did mention that some shootings

were for no reason.

[Harper High School, Part One | This American Life](#)

[YES, IT COULD BE](#)

[Microwave Cooking Humanity - Deborah Tavares Barrie Trower](#)

WOULD NOT SURPRISE ME – I ALWAYS BELIEVED THAT RWANDA WAS – AMONG OTHER THINGS – A PROTOTYPE

NOTE RISING DEFAULTS ON CAR LOANS – anticipate it is a similar problem

Hi Catherine,

Just FYI, I heard about a new documentary called Abacus: Small Enough to Jail. It is described as the story of the Sung family who ran a small family-owned bank in Chinatown in NYC. Their bank was the only bank to face criminal charges in the wake of the 2008 financial crisis. I'm hoping it will eventually become available to watch online somehow.

Hi Catherine,

Driving home listening to interview with George on Coast to Coast and you talking about spiritual warfare.

It is the crux of why I made the choice to work as a janitor in a bank.

I was conflicted on e-mailing you the first time about a vault in a

bank being nothing more then storage for seasonal decorations . Knowing accepting a free subscription for information feels like being a someone who snitches on a drug dealer . Over exaggeration to anyone reading this but that was the first thought that went through my mind.

So then the snitch while he is in prison finds Jesus comes up.

I thought when I first started working for my past employer that being a naval officer, family man, church going citizen that it would be a honor to work for him . Being a independent lumberyard not a corporation . Not being a Automaton an compromising in order to make a living . In some respects that turned out to be true . But because of money in other respects it was worse because he had more to lose I think .

Because of all of that this will be my last e-mail about what is going on in the banks . We all know where it is heading and we keep making excuses for another day or week or year.

It is a slow burn . We are living it and it all comes back to choices.

Good morning Catherine,

Thanks for the Local Economy interview and links. Fort Collins, Colorado, my home town, has a good local food system in development.

I had the intention to email you if you have any plans on doing a luncheon in the Denver area, and then, In the last introduction section you mention that you are coming to Boulder after the October 9th luncheon in Dallas.

Are you going to do a small luncheon while in Boulder, or do you have availability for coffee, wine, lunch or dinner ? I would love to meet any co-conspirators in the area, besides my own spiritual warrior students. A few of them have signed up for your reports.

Can you provide more information about the tv interview and station, so I can view it and share?

Again, I greatly appreciate the holistic support you provide in how to thrive outside the matrix and co-create a sovereign life, free of the Weitiko virus. I appreciate how much your eyes are wide open, and still you stay in a spiritually positive orientation, finding the Beauty around you! Thank you! This isn't easy!

www.centerforhorsesandhealing.com

Dear Catherine and Dr. Farrell:

Thanks to Catherine's warning re the approaching constitutional convention, I believe I see what is fast descending upon this nation.

I am not certain how seriously you take the talk about the "Disclosure", but I follow it daily and believe there really is a movement within primarily our military to take down the cabal(s) and dismantle their parasitic system, returning us to the republic.

This includes the Secret Space Alliance folks who are being aided by friendly ETs (and a few very old civilizations living beneath earth's surface.)

My point is that negotiations have been going on, it is reported, between the Earth and Space Alliance good guys and the cabal(s) as to how the disclosure is to be implemented. The cabal(s) naturally argue for a slow and partial disclosure "in the interests of avoiding a planet-wide panic" but which they really desire to preserve their lives a little longer and their chances for escape, and, the Alliance folks want to dump all the truth at once and get it over with, facing the resulting chaos and not giving the cabal(s) a chance to undermine the truth further.

Whatever you accept as true in this scenario, allow me to conjecture the following based on this carefully reported situation on the alternative media:

I suspect that the constitutional convention is the Hail Mary play by the cabal(s) that would neuter the entire disclosure movement because that movement is based on reinstating the constitutional government this nation was founded on.

With the constitution thrown out, the field is open for the cabal(s) to take the initiative whereas now they are on the defensive and convinced, so they indicate, that the disclosure will happen and their days are numbered.

For me, the clock to watch is the one that is counting the days until the C. convention and/or the Disclosure, whichever comes first. With the former, we lose, with the latter, we win.

Thanks to you both for providing your most excellent insights. Without you, so much of this would not be clear at all.

Dear Catherine,

In the immortal words of Rahm Emanuel, Never Let A Good Crisis Go To Waste.

So.....do you think that the Obama override, which will open up a lot of lawsuits against Saudi Arabia AND lawsuits by other countries against the U.S., will be used as a cover for the U.S. to commit financial shenanigans and shell games?

Being a Solari member is training me to never take anything at face value!

Thanks,
Jo

EXACERBATE THE MIDIANITE THING

Dear Catherine,

Thank you for your excellent interview with Joseph Farrell published this week. I follow each of you closely.

Now that the media is going bonkers over the release of Trump's remarks he made back in 2005 (or thereabouts), do we now have Lewinsky 3? This brouhaha is a total distraction from the critical issues that you address in your most recent interview, in my opinion.

THIS IS PART OF MONICA LEWINSKY II

Would you be interested in and willing to do an in-depth piece on the fact that, since we have been living under a "state of emergency" since 9/11/01, the Constitution is in abeyance, a situation that will continue as long as the Congress decides to end the "state of emergency." I think I have this right. Also involved is the Continuity of Government issue. I would very much value hearing from you on these foundational issues as no one else seems to care much.

I WILL LOOK FOR SOMEONE TO INTERVIEW ON THE CONSTITUTIONAL ISSUES

Finally, what is the heavenly music that you use as a prelude to your interview? It is Bach, but which piece? I would like to know as I want to learn to play it.

I wish I could join you all in Oklahoma for what will be a total blast!

Hi Catherine,

I listened last evening to your News and Trends and I agree with your concern about the proposed effort to give the CDC the ability to detain us for any vague reasons and shoot us with who knows what. I feel the connection between this effort and the obvious (to me) reporting of the zika "scare"...an entrainment operation, for certain.

My question is: do you have any recommendations for our being able to stop this? I have

two health freedom newsletters asking for us to write our congresspeople. There has been very little news about this except for you and Jon. Any other suggestions?

Thanks again for your efforts to wake and empower the people.

WRITING CONGRESSMAN IS A GOOD IDEA. ALSO CALLING CONGRESSIONAL STAFF

NETWORK LOCALLY - FIND OUT WHAT THE PLANS LOOK LIKE WITH LOCAL FIRST RESPONDERS ETC

PLAN B

Dear Catherine,

In your 3rd Quarter Wrap-up with Joseph Farrell, I perked up on hearing Joseph's mention of Philippine President Duterte's actions vis-a-vis the US. He is SO right about this being a "huge thing".

The UK's Guardian has perhaps the most well-balanced view of his first 100 days as president. Everything- good and bad- said about him by Filipinos interviewed rings true to my ears. Note also the "banker" quoted in the piece- whose views reflect so much of the condescending hypocrisy of CNN/NYT/usual mainstream Western media. Whether Duterte is truly acting independently of covert US influence (he has accused the CIA & FBI of threatening to take him out - real or not? Dunno!), he's certainly saying and doing things that disturb the highly controlled "smooth waters" desired by the globalists- at least on the face of it. He's still a wild card, to be sure, but it's amusing to watch the Western media cover his antics with a uniform agenda clearly set by their puppet masters. Meanwhile, most Filipinos who have never seen a leader of theirs stand up to the US and EU powers with such defiance are rallying to his side. They decry their media's narrow focus on Duterte's drug war tactics that ignores the many good, positive things he's also done for the people sick and tired of the usual pils of all words and no action.

<https://www.theguardian.com/world/2016/oct/08/rodrigo-duterte-first-100-days-philippines-president>

So, this may seem trivial, but does it have to take a rabble rouser, a vulgar pol who upsets the Western-designed appletart to bring attention to a tiny Third World country long regarded as a US puppet? In a word, yes.

IMPORTANT - SOUTH CHINA SEA PRESENCE

Continuing to watch the region for the next moves by China and Russia as this little country's maverick leader seems to be getting out from under the skirts of the USA- finally, if true. But the big question is- will he last in his position beyond 2017 if he's truly ripping apart the US hegemony in the region?

Once again, thank you for all you and your guests do

NO WAY TO KNOW – VERY FLUID

=====

Next year, we may see the launch of the first true quantum computers.

PLEASE LEARN ABOUT QUANTAM COMPUTING

The implications will be staggering.

This blog aims to answer three questions:

1. *What are quantum computers?*
2. *What are their implications?*
3. *Who's working on them?*

There's a lot to unpack here, so hang tight, and let's jump in!

What is Quantum Computing?

Moore's Law (or the exponential growth of integrated circuits) is actually referring to the fifth paradigm of computation. Here's the list of the underlying technologies: (1) Electromechanical; (2) Vacuum Tube; (3) Relay; (4) Transistors; and (5) Integrated Circuits.

Quantum computers may well be the sixth paradigm, given that they work in a fashion that is entirely different from "classical" computers.

A classical computer performs operations using classical "bits" – these "bits" can be in only one of two states: "0" OR "1."

In contrast, a quantum computer uses 'quantum bits,' or 'qubits'. Thanks to a principle called quantum superposition, these qubits can have a value of "0", "1," or both "0 AND 1" at the same time.

This capability allows quantum computers to solve certain types of complex problems that are intractable for conventional computers. Frankly, really exciting problems for society today, as you'll see below.

For a tutorial on quantum computers, check out this short video: [LINK](#)

The power of qubits is that they scale exponentially. A 2-qubit machine allows you to

do four calculations at once. A 3-qubit machine can do eight calculations. A 4-qubit machine gives you 16 calculations, all simultaneously.

By the time you get to 300 qubits, you've got a computer that can do more "calculations" than there are atoms in the universe.

That's why the blog TechTarget described Quantum computing this way: *"Development of a quantum computer, if practical, would mark a leap forward in computing capability far greater than that from the abacus to a modern day supercomputer, with performance gains in the billion-fold realm and beyond."*

What Are the Implications of Quantum Computing?

The implications of true quantum computing at scale are staggering, of extraordinary impact to society today (which is why I'm tracking it).

In my opinion, here are the **Top 5 Applications**:

1. **Machine Learning**: Much of machine learning is about "pattern recognition."

Algorithms crunch large datasets to find signals in the noise, and the goal is to maximize the number of comparisons you make between data to find the best models to describe that data. With quantum computing, we'll be able to do this processing orders of magnitude more effectively than with classical computing. Quantum computing will allow you to compare much, much more data in parallel, simultaneously, and all permutations of that data, to discover the best patterns that describe it. This will lead to fundamentally more powerful forms of AI, much more quickly than we expect. Expect Quantum Computing to cause a positive inflection point (upward) for the speed at which the world develops AI (which, by the way, is why Google is working so hard on it).

2. **Medicine**: Quantum computing will also allow us to model complex molecular interactions at an atomic level. This will be particularly important for medical research and drug discovery. Soon we'll be able to model all 20,000+ proteins encoded in the human genome and start to simulate their interactions with models of existing drugs, or new drugs that haven't been invented yet. Based on the analysis of these drug interactions, we'll be able to find cures for previously incurable diseases and hopefully accelerate the time to market for new drugs. Using quantum computer simulations will be the way we design and choose our next generations of drugs and cancer cures.

3. **Chemistry (and Climate Change):** Worried about the climate crisis? Wondering what we can do about it? Quantum computers may be our newest tool to understand what is going on and to fight it. They will allow us to unlock “simulation-driven” solutions, perhaps design new catalysts that actually capture carbon from the atmosphere and turn it into new and valuable products at low cost and energy use.
4. **Material Science & Engineering:** Because we can simulate atomic interactions, we’ll explore and invent entirely new, better materials. We might find better superconductors, better magnets, materials that will allow us to create much higher energy density batteries, and so on. Since 2011, the U.S. federal government has granted over \$250 million to the Materials Genome Initiative in an effort to “discover, manufacture, and deploy advanced materials twice as fast, at a fraction of the cost.”
5. **Biomimetics, Energy Systems & Photovoltaics:** Scientists believe that much of the world is built atop quantum systems. Processes like photosynthesis, for example, are likely dependent on quantum mechanical systems. Thus, as we look to the natural world for inspiration to build better energy systems or stronger materials, we’ll only fully realize their potential when we can model these processes with quantum computers. This will lead to many advances and discoveries across the board.

Bottom Line: When quantum computing pans out, we'll be able to control the very building blocks of the universe.

The question is who is going to figure it out first...

Who's Working on Quantum Computing?

There's a race going on – a race to prove something called "quantum supremacy." Quantum supremacy is essentially the test that validates that the computer you have is in fact a quantum computer.

In the U.S., three major players are in the game right now:

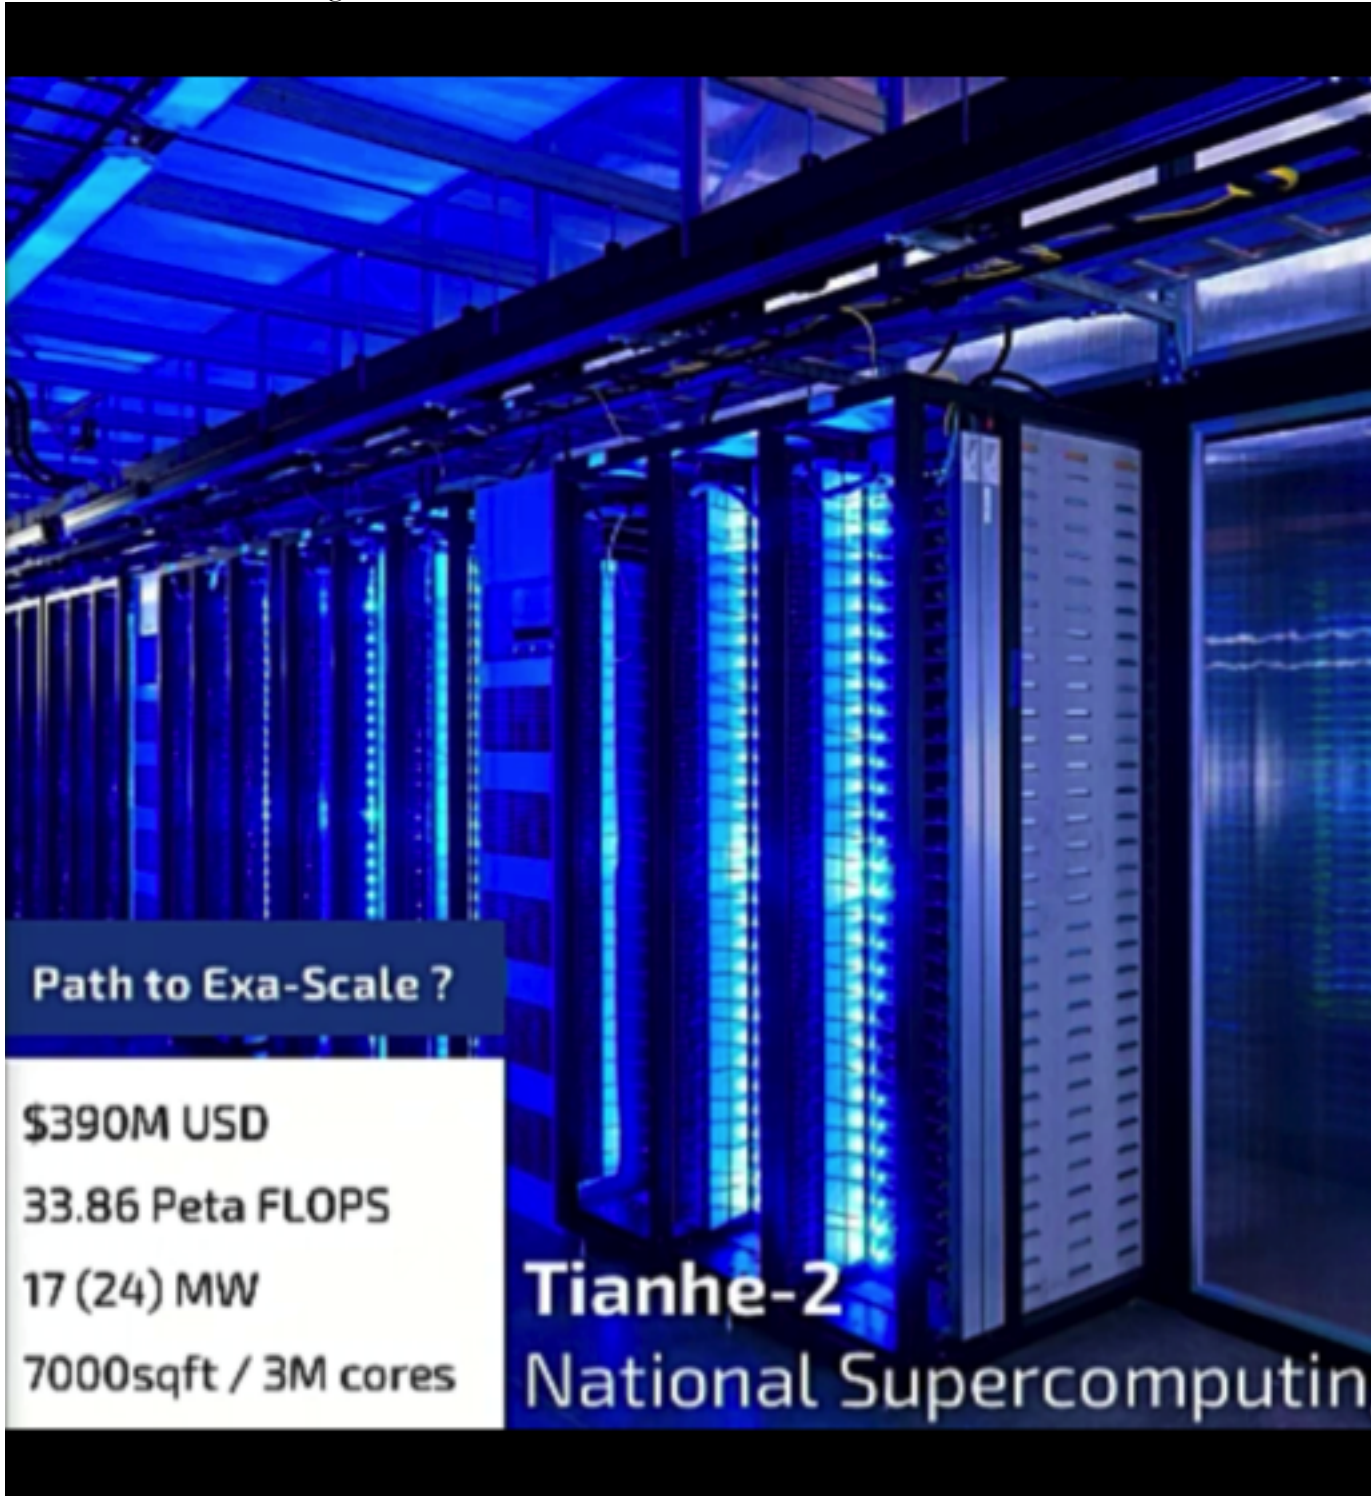

- Google
- IBM
- Rigetti Computing, a startup out of Silicon Valley

(And perhaps a fourth -- D-Wave Systems. They've developed chips with qubits, but these haven't yet been conclusively proved to operate as a quantum computer.)

Both Rigetti Computing and Google believe they will reach "quantum supremacy" in the next 12 to 18 months.

Think about that: the next one to two years...

The revolution is coming fast.

(Tianhe-2: The most powerful super computer on the planet)

It costs \$400 million.

The computer burns about 20 megawatts of electricity – enough to power 20,000 households.

And it's about half the size of a football field, with 3.2 million Intel cores.

President Obama, in the attempt to drive America's return to high-performance computing supremacy, declared that the U.S. would build an exoscale computer, 30x more powerful than Tianhe-2, by 2020.

The problem is this: With current technology, it will cost a billion dollars and will require a nuclear power plant to run the supercomputer.

"We need to do this," explains Chad Rigetti. "But there is another path. Quantum computing."

Below is a picture of two developmental systems in Rigetti's lab in Berkeley, CA.

Computing with Quantum Physics

A faster, cheaper path to exascale

(Developmental quantum computing systems, Rigetti Computing)

The big white cans about the size of a human are cooling systems, and inside each cooling system is a single quantum chip.

In these machines today, there is a 5-qubit processor.

The crazy part: A single chip with about 50 to 60 qubits on it would be more powerful than the entire Tianhe-2, a half-a-football-field-sized machine...

This is what quantum computing unlocks.

Rigetti is rapidly developing quantum integrated circuits and the software platform that will allow developers to build on top of them.

Along with efforts at Google, IBM, D-Wave, and many other companies and research labs around the world, we are rapidly approaching a quantum computing

revolution.

Get ready.

<https://youtu.be/MMKFIHRpe7I>

Just in case anyone actually thinks the recent events aren't staged... The WWE playbook video...

But the sad part to me is that so many can't see that.

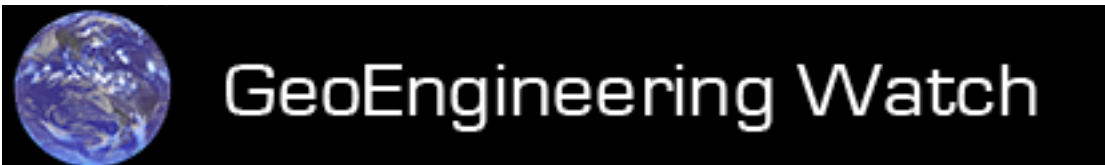

Thank you for your excellent analysis and excellent interview with Greg Hunter. Monica Lewinsky 2.0 indeed!

Please tell me the name of the composer and the composition of the heavenly music that Catherine has selected for the prelude to her interview with Dr. Farrell. I want to get the musical score and learn to play it on my piano at home.

Thank you for your kind attention. I look forward to hearing from you soon.

BACH – I E-mailed the source

From: mailer@infusionmail.com [mailto:mailer@infusionmail.com] **On Behalf Of** GeoEngineering Watch **Sent:** Monday, October 10, 2016 11:33 AM **To:** weckmansj@hughes.net **Subject:** CIA Whistleblower Speaks Out About Climate Engineering, Vaccination Dangers, 911, And The Government's Persecution Of Truth-Tellers

CIA Whistleblower Speaks Out About Climate Engineering, Vaccination Dangers, 911, And The Government's Persecution Of Truth-Tellers

By Dane Wigington

Kevin Shipp was a decorated CIA officer [who refused to look the other way in regard to government cover-up](#). At a very important public awareness event that was recently held in Northern California, Mr. Shipp gave an extremely informative and compelling presentation on numerous horrific ongoing government crimes. Kevin Shipp's address included climate engineering, the 911 false flag inside job, vaccination dangers, and the government's total persecution of anyone who dares to tell the truth about rampant government tyranny. Shipp's powerful presentation is below.

The paradigm we have all known has been built on deception and the dark agendas of the global power elite. The courage Kevin Shipp has shown by doing his best to expose government criminality and tyranny serves as an example to all of us. We desperately need other individuals in government agencies and the US military to follow Kevin's lead. If we have any chance of stopping the completely out of control criminal cabal that currently runs our country and much of the world, [we must all make our voices heard](#), we must all join the battle for the good of our country.

[Click here for the full article >>](#)

Dear Catherine,

Here's an interesting story from...NPR! The speculation on why Meiring was spirited out of Davao and the country is not hard to believe, although am shocked a story like this about covert US operations abroad has made it to NPR at all.

<http://kvcnews.org/post/why-philippine-president-rodrigo-duterte-distrusts-us#stream/0>

Kind regards,

<http://www.hollywoodreporter.com/news/tom-cruises-mena-movie-pushed-918164>

No way was the Clinton machine going to let this movie interrupt Hillary's march to the White House.

In fact, they had to warn Tom Cruise by shooting down the plane on set that was being flown by his "double" who was killed! Of course, what is one more death in the Arkansas saga regarding the Clintons in Arkansas. My home town was near Mena Arkansas. My Dad told he {CLINTON} that he was such a womanizer that he should NEVER put his family through this grief.

In 1965, I moved to Texas where we raised out family. One of our children attended High School with the son of the attorney who finally was brave enough to take the Paula Jones case. This was the deposition in which Clinton lied about knowing Monica. As it turns out, Clinton himself had invited the Judge from Arkansas which the case was filed to be at the deposition to make sure they did not "harass" him. Unfortunately for him, because she was present, he lied to a Judge! She was the one who took his law license away for a year! Big deal! Anyway this Judge also took the court reporter's video of the deposition and destroyed it so that will never haunt him.

It is apparent that the fix is in and Hillary will be running the "world government" for the next 8 years! The rest of the world will get the 'delightful! Ugh" please of seeing what we were dealt in Arkansas.

So sorry I missed your luncheon in Dallas but we were out of town.

PS I know Trump will never win; but I will so enjoy the next few weeks as someone finally has the guts to take on the Clinton machine!

NOT SURE I WOULD COUNT HIM OUT – depends on the covert operations – he clearly has some - NOT OVER UNTIL IT IS OVER – IF ANONYMOUS DUMPS OUT THE VIDEO

Dear Catherine,

In my small town, Wal-Mart rules. I've noticed something odd with the supply level:

The shelves just aren't fully stocked on a consistent basis like they used to be; the dry food shelves, and the frozen food shelves, have a lot of empty spaces.

They don't fully stock shredded cheeses; yes, you can get shredded cheese, but not the brand and flavor you want.

The one thing you CAN get in abundance is highly processed CAKE. It's everywhere!

At least in Marie Antoinette's day, the cake was homemade.....

SEEING THIS THINING ALMOST EVERYWHERE WEALTH 3.0 still fine

Dear Catherine:

Despite the fact that the people here in the U.S. are very angry today about politics and their government, we typically don't see the same kind of protests and civil disruptions that we saw happening back in the 1960s. Would you say that a major reason for this would be that there's better control and manipulation of our population today through the media?

RISKS, EFFECTIVE USE OF THEIR TIME

Dear Catherine:

You've mentioned that the debt growth model is over. With this in mind, explain what will now happen differently if our government continues

implementing quantitative easing.

DEBASEMENT WILL ACCELERATE – income growth 0%, expense inflation 7%, shadow work rising, debasement of environment rising – serious squeeze – challenge is need to start overhauling institutions, can't just keep slow burning
